4. Clunked going to change oil cooler
5. Oil pump

The engines are inline, four-cylinder, four-stroke diesel engines with overhead valves. They are of the direct-injection type and have representative controlled waste cooling of the cylinder head and cylinder head.

The engine has wet-sump, replacement cylinder heads and two separate cylinder heads, each of which covers three cylinders. The cylinder heads are directly interchangeable.

Installation takes place through a hard-hat system where an oil pump delivers oil to all lubricating points.

The turbocharger supplies the engine with fresh air under pressure, providing boost air. This means that the fuel injection quantity can be increased, thereby giving increased engine output. The turbocharger is lubricated and cooled by the engine lubrication oil and is driven by the engine exhaust gases. Excessive rotation can be prevented by means of a wastegate.
