Szejtli,2013-11-11

Cyclodextrins are gaining industrial interest owing to their particular structure These cyclic amyloses are commonly composed of 6 7 or 8 named α β γ CD glucose units They undergo complexation with quite a large number of substances by molecular inclusion Their potential for industrial application is substantiated by their ability to protect fragile substances from oxygen and UV to delay the evolution of volatiles and to aid the ancillary processing of dangerous or volatile substances in powdered form Though α and γ CD exhibit different inclusion specificity β CD has found more attention than the others This is due to the fact that most of the cyclodextrin producing enzymes known produce predominantly β CD Furthermore β CD is by far the least soluble form leading to a relatively simple production and purification Consequently β CD is already in

production on an industrial scale while α and β CD are still more or less regarded as specialties. A further CD producing enzyme has been found in the medium of *Klebsiella pneumoniae*. Since this CGT appeared to produce predominantly α CD it has been chosen to develop a process for the production of α CD.

Superconductivity And Particle Detection - Proceedings Of The International Workshop G Waysand, A Morales, T A Girard, 1995-03-07. Superconductors today constitute a major focus of activity in the development of high resolution detectors for many applications. This volume collects the papers of an international workshop on the basic theoretical and experimental issues involved in the interaction between particles and superconductors. It emphasizes the involved condensed matter aspects of non equilibrium time dependent Ginzburg Landau equations metastable superconductivity quasiparticle and phonon lifetimes and quasiparticle trapping as well as low noise pulse electronics detector fabrication and low background cryogenics.
