

Figure 2.1 Logic circuit for 4 bit full adder and subtractor

In summary, a 4-bit ripple carry adder cum subtractor is a versatile circuit that can handle both addition and subtraction operations on 4-bit binary numbers based on a control input. It offers flexibility in arithmetic operations while utilizing a common hardware platform.

2.3 PROCEDURE:

Step 1: Creating a Ripple Carry Adder in Verilog involves describing the behavior of the adder in a high-level hardware description language. It performs both addition and subtraction based on a control input. Here, we'll use M as the control input, where $M = 0$ corresponds to addition, and $M = 1$ corresponds to subtraction. Here is a simple algorithm for designing a 4-bit Ripple Carry Adder using Verilog:

Verilog code:

```
module Add_half (
  input a, b,
  output c_out, sum
);
  xor G1 (sum, a, b);
  and G2 (c_out, a, b);
endmodule
```

the head of the Engineering Directorate at the National Science Foundation provided much of the impetus for the needed effort. The results of early work of researchers many of whom have authored chapters in this book were fundamental in conceiving the ideas behind Design for X or DFX and concurrent engineering issues. The artificial intelligence community had a strong influence in developing the required computer tools mainly because the field had a history of interdisciplinary work. Psychologists, computer scientists and engineers worked together to understand what support tools will improve the design process. While this influence continues today, there is an increased awareness that a much broader community needs to be involved.
