Vut 2016 Applications:

Geometry of CR-Submanifolds and Applications Bang-Yen Chen, Mohammad Hasan Shahid, Gabriel-Eduard Țîlcu, 2025-08-29 This book attempts to present a comprehensive survey of the geometry of CR submanifolds. The theory of submanifolds is one of the most interesting topics in differential geometry. The topic is introduced by Aurel Bejancu as a generalization of holomorphic and totally real submanifolds of almost Hermitian manifolds in 1978. Afterward, the study of CR submanifolds became a very active research subject. Organized into 22 chapters, the book starts with basic knowledge of Riemannian manifolds and submanifolds, almost Hermitian manifolds and their subclasses, Hopf fibration, symmetric spaces, and a general inequality for submanifolds in complex space forms in Chaps 1 and 2. Later, it presents the main results on CR submanifolds in Kähler manifolds, the basic inequalities associated with CR submanifolds in Kähler manifolds, and several theories and results related to Kähler manifolds in Chaps 3–11. Further, the book discusses the basics of almost contact metric manifolds and their subclasses, CR submanifolds of Sasakian, trans-Sasakian, and quasi-Sasakian manifolds, with a particular attention on the normal CR submanifolds in Chap 12. It also investigates the contact CR submanifolds of Sasakian manifolds, the geometry of submersions of CR submanifolds, and the results on contact CR warped product submanifolds in Chaps 16–18, 20. In Chapter 19, we discuss submersions of CR submanifolds. The book also presents some recent results concerning CR submanifolds of holomorphic statistical manifolds. In particular, it gives the classification of totally umbilical CR statistical submanifolds in holomorphic statistical manifolds, as well as a Chen–Ricci inequality for such submanifolds. Chapter 21. In the last chapter, we present results on CR submanifolds of indefinite Kähler manifolds and their applications to physics.
