security products such as firewalls or network intrusion detection systems are completely blind to those malicious activities and therefore can not offer any protection at all Modern protection mechanisms require more sophisticated detection capabilities in order to protect enterprises assets from such attacks now and in the future Additionally web application security currently is a highly dynamic and also very emerging field within enterprises IT security activities Therefore this diploma thesis aims to provide a strong focussed picture on the current state of web application security and its different possibilities to raise the overall security level of already implemented web applications and also of future web applications Acting as a basis for further analysis the currently most common web application vulnerabilities are described to get an overview of what a web application has to be protected of and where the root problems of these weaknesses are lying Although these generic categories may not be applicable to every actually implemented web application they may be used as baseline for future web applications Armed with the background of the current vulnerabilities and their related root causes a detailed analysis of currently available countermeasures will provide recommendations that may be taken at each of the certain stages of a web application s lifecycle Since all further decisions generally should be based upon risk evaluations of specifically considered systems a possible risk management assessment methodology is provided within the thesis Controls and countermeasures are provided from an *Appity Slap: A Small Business Guide to Web Apps, Tech Tools and Cloud Computing* , Mastering OWASP Cybellium,2023-09-06 Cybellium Ltd is dedicated to empowering individuals and organizations with the knowledge and skills they need to navigate the ever evolving computer science landscape securely and learn only the latest information available on any subject in the category of computer science including Information Technology IT Cyber Security Information Security Big Data Artificial Intelligence AI Engineering Robotics Standards and compliance Our mission is to be at the forefront of computer science education offering a wide and comprehensive range of resources including books courses classes and training programs tailored to meet the diverse needs of any subject in computer science Visit <https://www.cybellium.com> for more books *Document Analysis and Recognition - ICDAR 2021 Workshops* Elisa H. Practical Security for Agile and DevOps Mark S. Merkow, 2022-02-13 This textbook was written from the perspective of someone who began his software security career in 2005 long before the industry began focusing on it This is an excellent perspective for students who want to learn about securing application development After having made all the rookie mistakes the author realized that
