Lab Goals: WebLogic Overview

This lab guide defines a standard set of functions for supporting the installation of WebLogic, and the creation of WebLogic domains. It is highly recommended to use the directories outlined in Table 1. Lab functions in the lab will reference these directories using the reference name and not the absolute path. You will see directory references throughout the lab in the following form:

Example: `$ORACLE_HOME/bin` and `runas user weblogic@<host>`

Whenever you see this variable notation, either for specifying a file path or specifying a file or directory path as part of some WebLogic resource configuration, be sure to use the fully qualified path and not the variable notation.

Table 1: Lab Directories

Directory Reference	Path
<code>LAB_HOME</code>	Location of lab scripts
<code>\$ORACLE_HOME</code>	<code>C:\ORACLE\HOME</code>
<code>\$ORACLE_HOME</code>	<code>C:\ORACLE\HOME\product\12.1.0\server</code>
<code>ORACLE_HOME</code>	Where ORCL is installed. Point to system
<code>\$ORACLE_HOME</code>	<code>C:\ORACLE\HOME</code>
<code>\$ORACLE_HOME</code>	<code>C:\ORACLE\HOME\product\12.1.0\server</code>
<code>\$ORACLE_HOME</code>	<code>C:\ORACLE\HOME\product\12.1.0\server</code>
<code>\$ORACLE_HOME</code>	<code>C:\ORACLE\HOME\product\12.1.0\server</code>
<code>\$ORACLE_HOME</code>	<code>C:\ORACLE\HOME\product\12.1.0\server</code>

Hardware Requirements

This lab requires a computer with sufficient memory and storage for installing WebLogic and creating 1 or more WebLogic server instances. Suggested minimum requirements:

- 4GB ram, 32GB recommended
- 30GB disk space

Software Requirements

The following software is required:

- Oracle WebLogic Server 12.1.2 (server installer)
- JDK 1.7a
- Any text editor (notepad, vs, TextPad, etc.)

Links to required software can be found in the Software section of this lab guide.

makes us lose track of what can be really done with Web services today and in the short term. These factors make it extremely difficult to get a coherent picture of what Web services are, what they contribute, and where they will be applied. Alonso and his co-authors deliberately take a step back. Based on their academic and industrial experience with middleware and enterprise application integration systems, they describe the fundamental concepts behind the notion of Web services and present them as the natural evolution of conventional middleware necessary to meet the challenges of the Web and of B2B application integration. Rather than providing a reference guide or a how-to-write-your-first-Web-service-kind-of-book, they discuss the main objectives of Web services, the challenges that must be faced to achieve them, and the opportunities that this novel technology provides. Established as well as recently proposed standards and techniques, e.g., WSDL, UDDI, SOAP, WS-Coordination, WS-Transactions, and BPEL, are then examined in the context of this discussion in order to emphasize their scope, benefits, and shortcomings. Thus, the book is ideally suited both for professionals considering the development of application integration solutions and for research and students interested in understanding and contributing to the evolution of enterprise application technologies.

The Java Tutorial for the Real World Yakov Fain, 2002-08 This book is a compressed practical manual on the Java programming language and consists of 21 lessons. The main features of the Java language are covered in the first half of the book, and such advanced topics as working with databases, Java Servlets, JSP, EJB, and JMS are explained in the second half. Most of the lessons from this book come with working applications and setup instructions. The first 10 lessons come with independent applications, and the second half of the book leads you through development of a Stock Trading System, the final version of which is designed using Java Servlets, JSP, EJB, and JMS. The book also contains technical questions and answers for the Java technical job interviews.

Environmental Health Perspectives, 2004-07 *Clinical Reasoning and Care Coordination in Advanced Practice Nursing* RuthAnne Kuiper, Daniel J. Pesut, Tamatha E. Arms, 2016-04-28 Teaches students how to think like an APRN. This book describes an innovative model for helping APRN students develop the clinical reasoning skills required to navigate complex patient care needs and coordination in advanced nursing practice. This model, the Outcome Present State Test (OPT), encompasses a clear step-by-step process that students can use to learn the skills of differential diagnosis and hone clinical reasoning strategies. This method facilitates understanding of the relationship among patient problems, outcomes, and interventions that focus on promoting patient safety and care coordination. It moves beyond traditional ways of problem solving by focusing on patient scenarios and stories and juxtaposing issues and outcomes that have been derived from an analysis of patient problems, evidence-based interventions, and desired outcomes. The model offers a blueprint for using standardized health care languages and provides strategies for developing reflective and complex thinking that becomes habitual. It embodies several levels of perspective related to patient-centered care, planning, team-centered negotiation, and health care system considerations. Through patient stories and case scenarios, the text highlights care coordination strategies critical in complex patient situations. It provides

students with the tools to collect patient information determine priorities for care and test interventions to reach health care outcomes by making clinical judgments during the problem solving process Concept maps illustrate complex patient care issues and how they relate to each other For faculty use the text provides links to relevant APN competencies and provides guidelines for using the OPT when supervising students in field settings Key Features Delivers a concrete learning model for developing creative thinking and problem solving in the clinical setting Offers a blueprint and structure for using standardized health care languages Includes patient stories and case scenarios to illustrate effective use of the OPT model Highlights care coordination strategies associated with complex client situations with the use of the Care Coordination Clinical Reasoning model Reinforces methods of reaching a diagnosis outcomes and interventions and how to duplicate the process

Transforming Health Care Through Information: Case Studies Laura Einbinder,Nancy M. Lorenzi,Joan Ash,Cynthia S. Gadd,Jonathan Einbinder,2010-03-14 By any measure our field of clinical informatics is poised for rapid growth and expansion A confluence of forces and trends including pressure to contain health care costs and simultaneously expand access and coverage a desire to reduce medical error and health care disparities the need to better understand and optimize our clinical interventions and delivery systems the need to translate new knowledge into practice quickly and effectively and the need to demonstrate the value of our services all call for the application of the methods and techniques of our field some of which are well honed with experience and some of which are still in the process of being discovered Clinical informatics is not the only solution to what ails health care but it is a critical component of the solution Our methods and techniques are similar in many ways to the knowledge base of any interdisciplinary field some are informed by experience the trials and tribulations of figuring out what works through real world implementation some are informed by controlled experimentation in randomized controlled trials and related studies some are informed by critical observation and analysis and some are developed through laboratory evaluation rather than field trials As we develop both the basic science as well as the applied science of our field there is a critical role for learning from others by way of case reports and stories
