O'Rourke,1998-10-13 This is the revised and expanded 1998 edition of a popular introduction to the design and
implementation of geometry algorithms arising in areas such as computer graphics robotics and engineering design The
basic techniques used in computational geometry are all covered polygon triangulations convex hulls Voronoi diagrams
arrangements geometric searching and motion planning The self contained treatment presumes only an elementary
knowledge of mathematics but reaches topics on the frontier of current research making it a useful reference for
practitioners at all levels The second edition contains material on several new topics such as randomized algorithms for
polygon triangulation planar point location 3D convex hull construction intersection algorithms for ray segment and ray
triangle and point in polyhedron The code in this edition is significantly improved from the first edition more efficient and
more robust and four new routines are included Java versions for this new edition are also available All code is accessible
