An approach to collective aspects of the neocortical system is formulated by methods of modern non-equilibrium statistical mechanics. Microscopic neuronal synaptic interactions are first spatially averaged over columnar domains. These spatially averaged domains include well formulated fluctuations that retain contact with the original physical synaptic parameters. They also are a suitable substrate for macroscopic spatial-temporal regions described by Fokker-Planck and Lagrangian formalisms. This development clarifies similarities and differences among previous studies, suggests new analytically supported insights into neocortical function and permits future approximation or elaboration within current paradigms of collective systems.

1. Introduction and rationale

Relative to other biological entities, the intricate synaptic activity of the most highly evolved mammalian human neocortex functions via the most degenerate and the shortest-ranged neuronal interactions. This suggests that many collective aspects of this system may be fruitfully studied similarly to other collective physical systems. I.e. collective effects from clustering of neurons (Szentagotai & Arbib, 1974) or from statistical interactions (Katchalsky, Rowland & Blumenthal, 1974) are proposed to be mechanisms of information processing. In addition to the 'hard-wiring' mechanisms also possessed by other more ordered cortical entities (Afti & Bergman, 1980; Sommerhoff, 1974).

An approach has been recently formulated for this purpose (Ingber, in preparation). Three major divisions of this work, corresponding to Sections IIIA, B and C respectively, will be referred to as SMNI-I, -II, -III, respectively. The preliminary results of this formulation recommend further detailed study of neocortical interactions using this methodology. Insights are gained into neocortical function at several scales of interaction, applicable to other related disciplines as discussed in Sections II and IV. In this sense, the possibility of a 'unified brain theory' is suggested.

Reasonable criteria for any physical approach should include at least three basic features in common with other collective physical systems.

(A) Interactions

Short-ranged neuronal interactions over time periods of several milliseconds should be derived from even more microscopic synaptic activities (Shepherd, 1977) [see Fig. 1(a)].

A Christian Divorce Christopher Lake, 2016-05-27 Divorce presents individuals with one of life's greatest adversities. And Christians are simply not immune. When it occurs, it must be endured and then overcome. The primary message of *A Christian Divorce* is radically simple: God calls us to live out our faith in every circumstance, including before, during, and after a divorce. To be a Christian, to be a follower of Jesus Christ, means that God has called us to lives of significance, not just on sunny days but on the days when we find ourselves caught in torrential downpours. And divorce is one of the most common downpours experienced in our country. If God can use the gruesome event of a crucifixion as a catalyst for faith, then the same God can certainly turn any hardship, including divorce, into an inspirational force to transform lives. Consequently, whether you or a loved one find yourself on the brink, in the midst, or living in the wake of divorce, *A Christian Divorce* points all who read it to seek Divine Counsel just as aggressively as they seek legal counsel. In a world that is desperately in need of Christians who are fully embracing and modeling the example of Jesus Christ, there is no greater opportunity to live out the Christian faith than through our own families, whether they are intact, broken, or breaking. *A Christian Divorce* encourages and challenges those who find themselves mired in divorce to recognize that now, perhaps more than ever, is crucial time to live out their faith.

The Future of Human Experience J. Zohara Meyerhoff Hieronimus, 2013-07-21 Explores the future predictions of cutting edge scientists, spiritual teachers, and other visionaries, and how we can affect the future. Shares insights from the author's discussions with Dr. Mehmet Oz, Raymond Moody, Larry Dossey, John Perkins, Michael Cremo, Gay Bradshaw, Ray Kurzweil, and many others. Examines what these visionary thinkers foresee for humanity based on current trends in medicine, science, agriculture, history, and other disciplines. Reveals how consciousness affects evolution and Earth's future. For almost three decades, Zohara Hieronimus has interviewed spiritual teachers, cutting edge scientists, ancient wisdom keepers, laboratory tested psychics, and other visionaries on their predictions for the near and far future. While the methods they use are significantly diverse, the similarities in their forecasts are striking. And as Hieronimus reveals, one common theme resonates through them all: the power of human consciousness. Sharing insights from her discussions with Dr. Mehmet Oz, Raymond Moody, Larry Dossey, John Perkins, Michael Cremo, Gay Bradshaw, Ray Kurzweil, and many others, Hieronimus explores what these visionary thinkers foresee for humanity based on current trends in medicine, science, agriculture, Earth history, robotics, and spirituality. She examines natural, extraterrestrial, and man-made events that dramatically altered humanity's course in the past or might in the future, revealing a recurring cycle of catastrophic Earth changes and rebirths of civilization over billions of years. The author explains that as part of the energetic expression of Divinity, we can influence the impact of Earth changes through our actions and intentions. She shows that the consciousness of humanity has the power to affect evolution, enact healing on personal and global levels, and alter even natural systems such as the weather. By studying predictions across a broad range of disciplines, from nano technology to plant intelligence, from today's great minds and from

ancient spiritual traditions Hieronimus shows that we can significantly improve the long term welfare of the Earth by unfolding our nonlocal consciousness adopting a reverent attitude toward all life and realizing how we do things is as vital as what we do **A Concise Survey of Music Philosophy** Donald A.
