Ortega, Robert G. Voigt, 1985-01-01 This volume reviews in the context of partial differential equations algorithm development that has been specifically aimed at computers that exhibit some form of parallelism Emphasis is on

the solution of PDEs because these are typically the problems that generate high computational demands The authors discuss architectural features of these computers inasmuch as they influence algorithm performance and provide insight into algorithm characteristics that allow effective use of hardware **Energy Research Abstracts** ,1992 *Correlation Between Human Factors and the Prevention of Disasters* David L. Barry,NATO Emerging Security Challenges Division,NATO Advanced Research Workshop on Correlation between Human Factors and the Prevention of Catastrophes,2012 The nuclear disaster at the Chernobyl power plant devastating floods landslides droughts the erosion of tailings dams and desertification are just some of the natural and manmade disasters which have afflicted the Ukraine and neighboring countries in recent years It is therefore entirely appropriate that the NATO Advanced Research Workshop ARW Correlation between Human Factors and the Prevention of Catastrophes was held in Dnipropetrovsk Ukraine in September 2011 This book presents the proceedings of the ARW which analyzed accumulated European theoretical knowledge and practical experience in the field of disaster prevention addressing a wide range of correlations between human factors and the prevention of catastrophes Subjects covered include land use planning and management procedures risk assessment in emergency situations control of polluted water socio economic impacts from desertification health impacts arising from nuclear facilities flooding and tailings dam accidents risk management systems and measures and the protection of water resources The presentations reflected the extensive experience of workshop participants and will be of great interest especially to countries that are developing their legal frameworks in civil emergency planning most particularly those who are aligning to EU directives and other international standards **Permafrost Soils** Rosa Margesin,2008-10-31 Most of the Earth s biosphere is characterized by low temperatures Vast areas 20% of the soil ecosystem are permanently frozen or are unfrozen for only a few weeks in summer Permafrost regions occur at high latitudes and also at high elevations a significant part of the global permafrost area is represented by mountains Permafrost soils are of global interest since a significant increase in temperature is predicted for polar regions Global warming will have a great impact on these soils especially in northern regions since they contain large amounts of organic carbon and act as carbon sinks and a temperature increase will result in a release of carbon into the atmosphere Additionally the intensified release of the climate relevant tracer gas methane represents a potential environmental hazard Significant numbers of viable microorganisms including bacteria archaea phototrophic cyanobacteria and green algae fungi and protozoa are present in permafrost and the characteristics of these microorganisms reflect the unique and extreme conditions of the permafrost environment Remarkably these microorganisms have been reported to be metabolically active at subzero temperatures even down to 20 C **ERDA Energy Research Abstracts** United States.
