Corporate Social Responsibility and

Discrimination Christina Keinert-Kisin, 2016-04-27 This book presents and deconstructs the existing explanations for the differential career development of qualified men and women. It reframes the problem of discrimination in the workplace as a matter of organizational ethics, social responsibility, and compliance with existing equal opportunity laws. Sensitive points are identified where social biases, decision makers' individual economic interests, and shortcomings of organizational incentive policies may lead to discrimination against qualified women. The ideas put forward are empirically tested in an original laboratory experiment that examines personnel selection in the male-dominated field of science and technology. It contrasts the selection of applicants with gendered and gender-blind applications available to subjects under controlled conditions. 30% of participants were high-level decision makers, which is unprecedented in this field of research. The results, highly relevant for organizational practice, are explained and discussed in detail.

Recent Advances in Partial Differential Equations and Applications Vicențiu D. Rădulescu, Adélia Sequeira, Vsevolod A. Solonnikov, 2016-06-28 This volume contains the proceedings of the International Conference on Recent Advances in PDEs and Applications in honor of Hugo Beirão da Veiga's 70th birthday, held from February 17-21, 2014, in Levico Terme, Italy. The conference brought together leading experts and researchers in nonlinear partial differential equations to promote research and to stimulate interactions among the participants. The workshop program testified to the wide-ranging influence of Hugo Beirão da Veiga on the field of partial differential equations, in particular those related to fluid dynamics. In his own work, da Veiga has been a seminal influence in many important areas: Navier-Stokes equations, Stokes systems, non-Newtonian fluids, Euler equations, regularity of solutions, perturbation theory, vorticity phenomena, and nonlinear potential theory, as well as various degenerate or singular models in mathematical physics. This same breadth is reflected in the mathematical papers included in this volume.

World Bank East Asia and Pacific Economic Update, Spring 2020 World Bank, 2020-04-07 Growth in the developing East Asia and Pacific region slowed sharply in 2020Q1 because of the negative impact of the COVID-19 on economic activity. The decline has been broad-based, reflecting the interconnectedness of the EAP economies and reverberations from the global economy as the virus turned into a pandemic. The COVID-19 outbreak followed an extended period of subdued growth in the region amid multiple external headwinds and heightened trade policy uncertainty. China and other regional economies have implemented monetary and fiscal policy measures to mitigate the negative impact of the outbreak. Growth in the East Asia and Pacific EAP region is projected to slow from 5.8 percent in 2019 to lower than expected 5.2 percent in 2020, reflecting the expected negative effects of the COVID-19. In this baseline scenario, which is subject to significant uncertainty, growth in the region is expected to recover to 5.6 percent in 2021 as the impact of COVID-19 gradually dissipates. In the medium term, regional growth is expected to continue its downward trend, reflecting multiple structural headwinds. Policymakers should focus on designing economically efficient transmission control policies that consider both the marginal costs and the marginal benefits of preventive measures. Such policies would ideally be based on countries' preparedness and exposure, as well as economic

circumstances Targeted fiscal and monetary policies can help reduce the economic disruption caused by COVID 19 in the short term In the medium term there is need to restore depleted buffers address sources of financial instability and invest in preventing and coping with infectious disease Given the growing interdependence between EAP countries coordinated policies and investments could increase resilience to shocks

Mechanics Of Elastic Solids David W A Rees,2018-09-26 This book examines the issues across the breadth of elasticity theory Firstly the underpinning mathematics of vectors and matrices is covered Thereafter the equivalence between the indicial symbolic and matrix notations used for tensors is illustrated in the preparation for specific types of material behaviour to be expressed usually as a response function from which a constitutive stress strain relation follows Mechanics of Elastic Solids shows that the elastic response of solid materials has many forms Metals and their alloys confirm dutifully to Hooke's law Non metals do not when the law connecting stress to strain is expressed in polynomial exponential and various empirical material specific forms Hyper and hypo elasticity theories differ in that the former is restricted to its thermodynamic basis while the latter pervades many an observed response with its release from thermal restriction but only at the risk of contravening the laws of thermodynamics This unique compendium is suitable for a degree or diploma course in engineering and applied mathematics as well as postgraduate and professional researchers
