*Decentralized Finance (DeFi) & Metaverse For Beginners 2 Books in 1 2022 Dave Shamrock, Justin Sonnen, 2022-03-31*

Decentralized Finance DeFi 2022 Cryptocurrency s promise is to make money and payments all around accessible to anyone regardless of where they are on the planet The Decentralized Finance DeFi or Open Finance development makes that promise a stride further Imagine a global open option in contrast to each financial service you use today investment funds loans trading insurance and more are accessible to anybody in the world with a cell phone and internet connection This is presently conceivable on smart contract blockchains like Ethereum Smart contracts are programs running on the blockchain that can execute consequently when certain conditions are met These smart contracts empower developers to work undeniably with more modern functionality than essentially sending and accepting cryptocurrency These projects are what we currently call decentralized apps or dapps You can think about a dapp as an app that is based on decentralized innovation instead of being built and constrained by a solitary unified substance or organization Become accustomed to this word dapp you ll be seeing it a ton from now into the foreseeable future While a portion of these concepts may sound cutting edge automated loans negotiated straightforwardly between two strangers in different parts of the world without a bank in the center a large number of these dapps are now live today There are DeFi dapps that permit you to make stable coins digital currency whose worth is fixed to the US dollar loan out money and earn

interest on your crypto apply for a loan trade one asset for another go long or short assets and carry out computerized advanced investment strategies Metaverse For Beginners 2022 When people talk about the future they usually mean virtual reality The reason is that when you say the future most people think of science fiction and nearly all SF takes place in a virtual space The word metaverse is actually an old term for cyberspace the virtual environment that exists on computers So you could argue that the metaverse and cyberspace are virtually the same things The word metaverse originally meant just one thing a synonym for the word universe Now it means a lot of things some contradictory Metaverse has the slick ring of the future around it but in reality it refers to past or present realities not just a future vision The term is thrown around so much that you can't trust what it means What we call the metaverse might be better termed the internet on steroids or something more accurate and less sexy sounding The metaverse is a little bit like virtual reality except not quite It's a confusing term these days That's because in the 90s Neal Stephenson of Snow Crash fame imagined the metaverse as a network of connected 3D spaces that users could interact with using VR goggles and haptic feedback devices The metaverse is the general term for all digital universes being connected We are just starting to build these worlds and it's easy to get sidetracked by the technologies that we're using to build them which are sometimes quite new Just as an aside remember how every startup in 1983 used a Commodore 64 as its main computer Even with that amazing machine no one really predicted anything like what the internet would become Hey everyone I'm doing a think piece that looks at the future of VR I'm really interested to hear from people on this one What would you like technology to do for you in the metaverse What new activities and experiences do you most want developing The main aim of this piece is to get a better understanding of what we actually want the future to be The metaverse can't become real until someone builds it with code Until then the metaverse is whatever we imagine it to be while we are building it together
