Source Code Optimization Techniques for Data Flow Dominated Embedded Software Heiko Falk, Peter Marwedel, 2013-03-19 This book focuses on source to source code transformations that remove addressing related overhead present in most multimedia or signal processing application programs This approach is complementary to existing compiler technology What is particularly attractive about the transformation flow presented here is that its behavior is nearly independent of the target processor platform and the underlying compiler Hence the different source code transformations developed here lead to impressive performance improvements on most existing processor architecture styles ranging from RISCs like ARM7 or MIPS over Superscalars like Intel Pentium PowerPC DEC Alpha Sun and HP to VLIW DSPs like TI C6x and Philips TriMedia The source code did not have to be modified between processors to obtain these results Apart from the performance improvements the estimated energy is also significantly reduced for a given application run These results were not obtained for academic codes but for realistic and representative applications all selected from the multimedia domain That shows the industrial relevance and importance of this research At the same time the scientific novelty and quality of the contributions have led to several excellent papers that have been published in internationally renowned conferences like e.g. DATE This book is hence of interest for academic researchers both because of the overall description of the methodology and related work context and for the detailed descriptions of the compilation techniques and algorithms

**New India** Arvind Panagariya, 2020-09-04 With a GDP that just reached 2.6 trillion India is poised to become the world's third largest economy in less than a decade. In doing so it will have moved one step closer to reclaiming its pre industrial glory when it accounted for one sixth of the global output and ranked second in economic size. This rapid movement in the absolute size of the economy will be insufficient however to bring prosperity to India's vast population. Today 44% of the country's workforce remains in agriculture and another 42% in small enterprises with fewer than twenty workers. Labor productivity of both sets of workers remains low and they live overwhelmingly on subsistence level incomes. In *New India Reclaiming the Lost Glory* Arvind Panagariya outlines a concise strategy to transform India from a primarily rural and agricultural economy to an urban and industrial economy with well paid jobs for those with limited skills. Panagariya argues that the creation of good jobs requires the emergence of medium and large enterprises in industry and services especially labor intensive sectors such as apparel footwear and other light manufactures. He explains that India needs policies conducive to the growth of firms from small to medium medium to large and large to larger still. Such policies include greater outward orientation more flexible land labor and capital markets concerted effort to improve the quality of higher education faster urbanization and improved governance at all levels. Written by a preeminent authority on the Indian economy *New India Reclaiming the Lost Glory* provides a data driven and persuasive roadmap for India to eliminate abject poverty accelerate economic growth and return to its historically prominent position in the global economy
