### **Agile Processes in Software Engineering and Extreme Programming**

Pekka Abrahamsson, Michele Marchesi, Frank Maurer, 2009-05-19 The field of software engineering is characterized by speed and turbulence in many regards While new ideas are proposed almost on a yearly basis very few of them live for a decade or a longer Lightweight software development methods were a new idea in the latter part of the 1990s Now ten years later they are better known as agile software development methods and an active community driven by practitioners has formed around the new way of thinking Agile software development is currently being embraced by the research community as well As a sign of increased research activity most research oriented conferences have an agile software development track included in the conference program The XP conference series established in 2000 was the first conference dedicated to agile processes in software engineering The idea of the conference is to offer a unique setting for advancing the state of the art in research and practice of agile processes This year's conference was the tenth consecutive edition of this international event Due to the diverse nature of different activities during the conference XP is claimed to be more of an experience rather than a regular conference It offers several different ways to interact and strives to create a truly collaborative environment where new ideas and exciting findings can be presented and shared This is clearly visible from this year's program as well

**Programming and Agile Methods - XP/Agile Universe 2003** Frank Maurer, Don Wells, 2011-04-08

XP Agile Universe 2003 is the third conference in a series running in North America and attracting participants from all over the world who are interested in the research development and application of agile software processes Agile approaches value people and interaction over processes and tools moving software engineering from the process oriented software development approaches of the 1990s towards people oriented approaches that we are starting to see more and more in this decade Agile approaches stress a holistic view of software developers as being involved in analysis design implementation and testing activities while more traditional Tayloristic approaches separate these tasks and assign them to different resources Tayloristic approaches create knowledge sharing problems as information gathered by one person needs to be handed over usually in the form of documentation to the next person in the chain Agile approaches reduce the number of hand-offs and thus decrease the amount of required documentation for knowledge sharing While deemed a novelty only a few years ago agile methods are now becoming established in the software industry and are being applied in more and more application domains While agile approaches move into the mainstream of software organizations we are only now beginning to understand their benefits areas of applicability and also their dangers This year's conference will increase this understanding and provide a better base for industry practitioners as they assess the effectiveness of agile methods in their environment
