The Living Signature: The Body's Power to Heal and the Question of Design Dr. Octavian Caius Obeada, 2025-06-26 In The Living Signature The Body's Power to Heal and the Question of Design science and spirit converge in a captivating exploration of the human body as more than mere biology Drawing from philosophy theology medicine and biology this book challenges the view that life is the product of blind chance From the cellular dance of regeneration to the breathtaking orchestration of body systems it reveals signs of purpose woven into the fabric of life itself For the scientist the skeptic and the seeker alike this is an invitation to see the body not just as alive but as alive with meaning I will praise thee for I am fearfully and wonderfully made wrote a grateful King David in Psalm 139 three thousand years ago He didn't know the half of it In this marvelous book Dr Octavian Caius Obeada focuses on the marvelous ability of life to regenerate and heal itself surveying what philosophers and theologians throughout the ages have surmised and detailing the intricate molecular mechanisms that have been discovered by scientists only in recent decades The result is a tour de force showcasing the intelligent design of life Michael J Behe PhD Professor of Biological Sciences at Lehigh University in Pennsylvania and a Senior Fellow at Discovery Institute's Center for Science and Culture and author of Darwin's Black Box The Living Signature by Dr Octavian Caius Obeada is a profound exploration of the human body's regenerative capacity framed as both a scientific marvel and a philosophical clue to purposeful design Drawing on decades of medical experience and insights from biology theology and systems thinking the book challenges reductionist views by asking whether healing is merely mechanical or a message of intention With compelling case studies and a multidisciplinary lens this work invites readers to see the human body not as an accident but as a living signature of meaning and design Adrian Anthony Dormans MD FAAFP From skin and bone to organs and DNA the regenerative capabilities of the human body are

not only astonishing they hint at something deeper The Living Signature lays out thoughtful well researched reflections and challenges you to consider whether the complexity and order we see in ourselves could truly be the product of blind chance or the body itself is whispering something about its origin a message not of randomness but of meaning Costiuc Alexandru M D Specialist in Gastroenterology Regina Maria Romania Resident Physician in Family Medicine University of Oradea

Exploring Drug Delivery to the Peritoneum Ranjita Shegokar, 2023-11-30 The Peritoneal cavity PC is the key metastatic site for intra abdominal malignancies e g GI tract and rectal cancer PC sites can be used to target several other diseases where lymphatic drug delivery is desired without dumping large amounts of the drug Till recently it was thought that treatment with curative intent was impossible but that was challenged by the introduction of cytoreductive surgery CRS and heated intraperitoneal chemotherapy HIPEC and PIPAC pressurized intraperitoneal aerosol chemotherapy Recently a growing number of preclinical and clinical studies advocate intraperitoneal IP chemotherapy as an alternative post operative therapy for cancer Although their effectiveness has been proven both experimentally and clinically there is still little understanding of the role of drug delivery systems DDS in targeting drugs in the intraperitoneal IP cavity There are two main challenges one posed by IP cavity where the residence time of a small molecular weight drug 20 kDa is not sufficiently long to maintain therapeutic effect This leads to frequent or continuous dosing Another challenge is device related or catheter related problems such as catheter obstruction increased risk of infection and bowel complications Overall literature shows that the IP site is satisfactorily explored by clinicians but in terms of drug delivery not that much One can see a clear cut gap of expertise exchange between the two fields and guidelines from regulatory lawmakers on new medications ppbr ppIn summary challenges like delivery to IP cavity tumor or organ specific targeting efficient tissue penetration optimal cellular uptake and intracellular residence of a drug biocompatibility toxicity etc can be easily solved by smartly designing functional drug delivery systems both nano and micro Nanotechnologies have always fascinated humans for several decades and are now widely explored in the biomedical field Diverse types of nanoparticles are being explored around the world some examples include biodegradable nanoparticles green nanoparticles polymeric nanoparticles lipid nanoparticles metal nanoparticles graphene carbon nanotubes and several others Now a day s nanoparticles are gaining interest for drug targeting of chemotherapeutic drugs immunotherapy and gene delivery Whereas microparticles can be explored for delayed drug delivery to the peritoneal cavity due to relatively slow removal from IP fluid Hydrogels or other adhesive drug delivery may help to enhance peritoneal adhesions thereby maintaining the balance between benefit and risk Overall drug delivery systems are key in IP targeting That means drug delivery specialist and clinician needs to be connected to get the best out of

this route of drug administration ppbr ppThe present book is a link between pharmaceutical scientists drug formulators clinicians toxicologists and regulatory experts This book also provides a new perspective to researchers to divert or guide their research in an optimal way Exploring Drug Delivery to the Peritoneum serves as a platform for upcoming technologies especially in the medical devices sector to face up and show potential in delivering drugs It is a chance for commercial partners like insurance companies and the pharma industry to explore this direction pp pp
