Stanton,Kirsten M. A. Revell,Patrick Langdon,2021-03-10 Driving automation and autonomy are already upon us and the problems that were predicted twenty years ago are beginning to appear These problems include shortfalls in expected benefits equipment unreliability driver skill fade and error inducing equipment designs *Designing Interaction and Interfaces for Automated Vehicles* User Centred Ecological Design and Testing investigates the difficult problem of how to interface drivers with automated vehicles by offering an inclusive human centred design process that focusses on human variability and capability in interaction with interfaces This book introduces a novel method that combines both systems thinking and inclusive user centred design It models driver interaction provides design specifications concept designs and the results of studies in simulators on the test track and in road going vehicles This book is for designers of systems interfaces interactions UX Human Factors and Ergonomics researchers and practitioners involved with systems engineering and automotive academics _ In this book Prof Stanton and colleagues show how Human Factors methods can be applied to the tricky problem of interfacing human drivers with vehicle automation They have developed an approach to designing the human automation interaction for the handovers between the driver and the vehicle This approach has been tested in driving simulators and most interestingly in real vehicles on British motorways The approach called User Centred Ecological Interface Design has been validated against driver behaviour and used to support their ongoing work on vehicle automation I highly recommend this book for anyone interested or involved in designing human automation interaction in vehicles and beyond Professor Michael A Regan University of NSW Sydney AUSTRALIA

Handbook of Human Factors for Automated Connected and Intelligent Vehicles Subject Guide Ergonomics Human Factors Automobile crashes are the seventh leading cause of death worldwide resulting in over 1 25 million deaths yearly Automated connected and intelligent vehicles have the potential to reduce crashes significantly while also reducing congestion carbon emissions and increasing accessibility However the transition could take decades This new handbook serves a diverse community of stakeholders including human factors researchers transportation engineers regulatory agencies automobile

manufacturers fleet operators driving instructors vulnerable road users and special populations It provides information about the human driver other road users and human automation interaction in a single integrated compendium in order to ensure that automated connected and intelligent vehicles reach their full potential Features Addresses four major transportation challenges crashes congestion carbon emissions and accessibility from a human factors perspective Discusses the role of the human operator relevant to the design regulation and evaluation of automated connected and intelligent vehicles Offers a broad treatment of the critical issues and technological advances for the designing of transportation systems with the driver in mind Presents an understanding of the human factors issues that are central to the public acceptance of these automated connected and intelligent vehicles Leverages lessons from other domains in understanding human interactions with automation Sets the stage for future research by defining the space of unexplored questions

User Experience Design in the Era of Automated Driving Andreas Riener, Myoungsoon Jeon, Ignacio Alvarez, 2022-01-01 This book is dedicated to user experience design for automated driving to address humane aspects of automated driving e.g workload safety trust ethics and acceptance Automated driving has experienced a major development boost in recent years However most of the research and implementation has been technology driven rather than human centered The levels of automated driving have been poorly defined and inconsistently used A variety of application scenarios and restrictions has been ambiguous Also it deals with human factors design practices and methods as well as applications such as multimodal infotainment virtual reality augmented reality and interactions in and outside users This book aims at 1 providing engineers designers and practitioners with a broad overview of the state of the art user experience research in automated driving to speed up the implementation of automated vehicles and 2 helping researchers and students benefit from various perspectives and approaches to generate new research ideas and conduct more integrated research

Driver Training for Automated Vehicles Siobhán E. Merriman, Katherine L. Plant, Kirsten M. A. Revell, Neville A. Stanton, 2024-04-30 Since the introduction of Automated Vehicles AVs on roads there have been a number of high profile collisions which have highlighted significant driver challenges These include challenges associated with drivers trust in the automation their knowledge and awareness of the AVs capabilities and limitations and their reduced situation awareness of the road environment and the vehicle Solutions are needed to overcome these challenges so that the expected benefits of AVs can be realised Driver Training for Automated Vehicles A Systems Approach identifies the training requirements for drivers of AVs and takes a systematic approach to design develop implement and evaluate a comprehensive training package to address these requirements This book explores how training can overcome the driver challenges associated with AVs by improving drivers mental models trust in automation decisions and behaviour when activating a Level 4 AV It presents a systematic approach to the training lifecycle by first presenting the current state of research into AVs identifying the challenges and training requirements for drivers of AVs and then developing and evaluating a training programme to achieve these requirements This fascinating title highlights the need

for drivers to undergo training for AVs and takes us a step closer to this need It walks readers through a systematic four step process and provides practical guidance to develop and evaluate an effective training programme The reader will develop a thorough understanding of the current driver challenges with AVs and the methods and systems to mitigate them through current knowledge and research This book is an ideal read for practitioners designers and academics with a professional or research interest in AVs Its appeal extends to those in the fields of automotive design Systems Engineering Human Factors and education and training

Hubris Maximus Faiz Siddiqui,2025-04-22 The rise fall and revival of the Caesar of Silicon Valley Elon Musk has cast himself as the savior of humanity an altruistic force whose

fortune is tied to noble pursuits from halting our dependence on fossil fuels to colonizing Mars Once frequently heralded as a modern day Edison Musk has taken up a new place in the public consciousness with his growing desire to disrupt not just the automotive and space industries but the policies that shape our nation placing him at the center of America's most complex undertakings in manufacturing politics and defense and technology even as his increasingly erratic personal behavior has raised questions about his stability and judgement Musk famously leads his companies from a bully pulpit eroding guardrails and cutting through red tape whenever possible with little regard for the fallout as long as it serves his larger goals Many in his orbit have seen their lives upended or their careers throttled by believing in his utopian vision As the scale of the wagers he makes with his fortune and concerns about his credibility have grown in recent years he alternately seems to be in complete command or on the verge of a meltdown Yet in the long run he has only become wealthier and now the stakes have risen Thanks to astute political maneuvering Musk is no longer limited to gambling with a company's bottom line or the livelihoods of his workers he is poised to apply his uncompromising approach to business to the foundational rules and regulations that hold our society together At a moment when America's tech gods are more influential than ever Hubris Maximus is a cautionary tale about the pitfalls of lionizing magnetic leaders Washington Post journalist Faiz Siddiqui offers a gripping detailed portrait of a singularly messy and lucrative period in Musk's career as well as a case study in the power of using one's platform to shape the public narrative in a world that can't turn away from its screens
