Chapter 1: Basic Terms and Concepts of Mechanical Ventilation Test Bank

MULTIPLE CHOICE

1. The body's mechanism for conducting air in and out of the lungs is known as which of the following?
- a. External respiration
 - b. Internal respiration
 - c. Spontaneous ventilation
 - d. Mechanical ventilation

ANS: C

The conduction of air in and out of the body is known as ventilation. Since the question asks for the body's mechanism, this would be spontaneous ventilation. External respiration involves the exchange of oxygen (O₂) and carbon dioxide (CO₂) between the alveoli and the pulmonary capillaries. Internal respiration occurs at the cellular level and involves movement of oxygen from the systemic blood into the cells.

DIF: 1 REF: pg. 3

2. Which of the following are involved in external respiration?
- a. Red blood cells and body cells
 - b. Scalenes and trapezius

Smit Sibinga,P.C. Das,C.P. Engelfriet,2012-12-06 As a clinical discipline blood transfusion encompasses enormous vista varying from biotechnology to molecular biology from plasma products cell biology and growth factors to interleukines Growth of knowledge in this field has been rapid and expertise is now required to be mastered and renewed in translating these ideas for patient care Various types of cells could be harvested progenitor stem cells derived from bone marrow or from circulating blood as a source for transplants in the hemostatic armoury platelets could be used prophylactically granulocytes and mononuclear cells are available for treatment of infections or immune modulations However their therapeutic use carries potential complications including graft versus host disease and CMV infection

Prevention of such complications by irradiation and by removal of immunocompetent leukocytes are important issues. Thus production of such therapeutic materials ought to address the issues at the earliest to eliminate those problems while adhering to the concept of high quality. The impact of storing platelets for longer periods by using improved plastic containers or storing almost indefinitely in frozen state should be explored. Rapid progress in cell culture techniques and biotechnology have enriched the transfusion medicine armoury with lymphokines, interferons and cell colony growth factors which have great potentials for enhancement of basic knowledge as well as considerable therapeutic applications in patients.
