Lesson 6

Bending Light

Objectives

After reading this lesson, you should be able to

- explain how light is refracted.
- describe how concave and convex lenses refract light.
- explain how lenses in eyeglasses can correct vision.

Refraction

The bending of a light ray as it moves from one material to another

Lens

A curved piece of clear material that refracts light waves

Concave lens

A lens that is thin in the middle and thick at the edges

When light moves from one kind of matter to another, the light waves change speed. As a result, the direction of the light changes. The bending of a light wave as it moves from one material to another is called **refraction**.

Notice that the pencil in the photo appears to be bent. Light travels more slowly in water than it does in air. When light passes from the water to the air, the light waves change speed and change direction. As a result, the pencil seems to bend.

Refraction causes the pencil to look like it is bent.

Lenses

A lens bends light by acting like the water in the container.

A lens is a curved piece of glass or other clear material that

refracts light waves that pass through it. Lenses are used in eyeglasses, cameras, magnifying glasses, microscopes, and telescopes. What you see through a lens depends on the kind of lens you use.

A concave lens curves inward. Look at Figure A. The lens is thin in the middle and thick at the edges. Light rays that pass through a concave lens are spread apart.

High Energy Spin Physics Werner Meyer, Erhard Steffens, Werner Thiel, 2012-12-06 The 9th International Symposium on High Energy Spin Physics was held in Bonn 6-15 September 1990 with the Physikalisches Institut der Universität Bonn as the host The symposium was preceded by a series of four workshops on polarized electron sources and electron spin polarimeters Siberian snakes and polarization in circular machines polarized gas targets polarized solid targets 160 participants from 11 countries among them many young physicists came together and discussed mainly technological spin

problems The high level of participation indicates that workshops combined with the symposium are attractive not only for people who plan and prepare polarized beams and targets but also for experimentalists and theorists dealing with high energy spin physics At these workshops many very interesting and important recent results were presented and reviewed Thus we hope these proceedings will be valuable to many researchers in these fields The Organizing Committee would like to thank all participants in particular the speakers and the session chairmen for their contributions to the workshops and for helping to create a lively and stimulating atmosphere Special thanks go to the organizers W Haeberli S Mango E Reichert E Steffens W Thiel U Wienands for their cooperation in preparing and running these workshops We gratefully acknowledge the enthusiastic help of the members of our institute in preparing and running the conference and the workshops especially Mrs D FaSbender Mrs E Wendorf Mrs J Wetzler and Dr U Idschok

An Assessment of U.S.-Based Electron-Ion Collider Science National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,Board on Physics and Astronomy,Committee on U.S.-Based Electron-Ion Collider Science Assessment,2018-10-13 Understanding of protons and neutrons or nucleons the building blocks of atomic nuclei has advanced dramatically both theoretically and experimentally in the past half century A central goal of modern nuclear physics is to understand the structure of the proton and neutron directly from the dynamics of their quarks and gluons governed by the theory of their interactions quantum chromodynamics QCD and how nuclear

interactions between protons and neutrons emerge from these dynamics With deeper understanding of the quark gluon structure of matter scientists are poised to reach a deeper picture of these building blocks and atomic nuclei themselves as collective many body systems with new emergent behavior The development of a U S domestic electron ion collider EIC facility has the potential to answer questions that are central to completing an understanding of atoms and integral to the agenda of nuclear physics today This study assesses the merits and significance of the science that could be addressed by an EIC and its importance to nuclear physics in particular and to the physical sciences in general It evaluates the significance of the science that would be enabled by the construction of an EIC its benefits to U S leadership in nuclear physics and the benefits to other fields of science of a U S based EIC
