Guerard, Jr., 2016-09-23. This volume inspired by and dedicated to the work of pioneering investment analyst Jack Treynor addresses the issues of portfolio risk and return and how investment portfolios are measured. In a career spanning over fifty years the primary questions addressed by Jack Treynor were: Is there an observable risk return trade off? How can stock selection models be integrated with risk models to enhance client returns? Do managed portfolios earn positive and statistically significant excess returns and can mutual fund managers time the market? Since the publication of a pair of seminal Harvard Business Review articles in the mid 1960s Jack Treynor has developed thinking that has greatly influenced security selection, portfolio construction and measurement and market efficiency. Key publications addressed such topics as the Capital Asset Pricing Model and stock selection modeling and integration with risk models. Treynor also served as editor of the Financial Analysts Journal through which he wrote many columns across a wide spectrum of topics. This volume showcases original essays by leading researchers and practitioners exploring the topics that have interested Treynor while applying the most current methodologies. Such topics include the origins of portfolio theory, market timing and portfolio construction in equity markets. The result not only reinforces Treynor's lasting contributions to the field but suggests new areas for research and analysis. **The nature of informed option trading: Evidence from the takeover market** Marco Klapper, 2014-02-01. This study examines the kind of information informed traders have prior to a takeover announcement using options of target firms and elaborates on the cross sectional relationship between options and stocks around takeover announcements. Financial markets are driven by information and by individuals that generate process and disclose this information to the market. Naturally there have to be individuals who possess more information about a firm or a future event than other market participants. Mergers and acquisitions are particularly interesting events in this regard because they can have significant implications for the firms and stakeholders involved as well as for the competitive dynamics in the respective market. Because of the large potential price impact of such transactions traders with private information about a prospective takeover are expected to trade on this information to make a profit. But who are these informed traders and what kind of information do they possess? This study tries to give a response to this question.
