Hwang,2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science
Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for
objective truths Educational researchers have recently begun to use large scale studies to understand what really works from
developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large
implementation of an intervention Moreover modeling student learning developmentally taking into account cohort factors
issues of socioeconomics local political context and the presence or absence of interventions requires the use of large data
sets wherein these variables can be sampled adequately and inferences made Inroads in quantitative methods have been
made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics
education community In fact currently there is no volume devoted to discussion of issues related to large scale studies and to
report findings from them This volume is unique as it directly discusses methodological issue in large scale studies and
reports empirical data from large scale studies **Glencoe Mathematics** William Collins,1999 **Glencoe Mathematics**
