Fairness Issues in Educational Assessment Hossein Karami, 2018-02-02 Fairness and ethicality have been at the center of the debates on the appropriate use of educational tests since the 1960s Particularly in high stakes contexts it is clear that fairness should be a major concern to both the test developers and to those being tested given that the fairness of a test is so intertwined with its validity Fairness Issues in Educational Assessment aims to shed more light on the issue and bring to sight some of the ways in which test fairness can be addressed The contributions written by some of the most prominent figures in educational assessment address both theoretical and practical aspects of test fairness The wealth of ideas presented here will be valuable to novice researchers and help them appreciate both the joy and complexity of conducting fair educational measurement This book was originally published as a special issue of Educational Research and Evaluation

The Ecology and Etiology of Newly Emerging Marine Diseases James W. Porter, 2013-04-17 The Ecology and Etiology of Newly Emerging Marine Diseases is a unique contribution to an entirely new field of scientific investigation For the first time material presented in this book identifies patterns and trends in the abundance and distribution of disease phenomena in the marine environment These patterns have gone unrecognised and undetected in the past because the literature in this field is so widely scattered The book is both interdisciplinary and synthetic Studies in this book unequivocally link marine diseases to global climate change The book changes our perspective on the major controls over the population dynamics of marine organisms Papers in this volume clearly identify the intimate connection between public health and environmental health for marine borne diseases such as cholera and human enteroviruses

Applied Psychometrics using SAS Holmes Finch, Brian F. French, Jason C. Immekus, 2014-06-01 The book will be designed primarily for graduate students or advanced undergraduates who are learning psychometrics as well as professionals in the field who need a reference for use in their practice We would assume that users have some basic knowledge of using SAS to read data and conduct basic analyses e g descriptive statistics frequency distributions In addition the reader should be familiar with basic statistical concepts such as descriptive statistics e g mean median variance standard deviation percentiles and the rudiments of hypothesis testing They should also have a passing familiarity with issues in psychometrics such as reliability validity and test survey scoring We will not assume any more than basic familiarity with these issues and will devote a

portion of each chapter as well as the entire first chapter to reviewing many of these basic ideas for those not familiar with them We envision the book as being useful either as a primary text for a course on applied measurement where SAS is the main platform for instruction or as a supplement to a more theoretical text We also anticipate that readers working in government agencies responsible for testing and measurement issues at the local state and national levels and private testing survey and market research companies as well as faculty members needing a practical resource for psychometric practice will serve as a market for the book In short the readership would include graduate students faculty members data analysts and psychometricians responsible for analysis of survey response data as well as educational and psychological assessments The goal of the book is to provide readers with the tools necessary for assessing the psychometric qualities of educational and psychological measures as well as surveys and questionnaires Each chapter will cover an issue pertinent to psychometric and measurement practice with an emphasis on application Topics will be briefly discussed from a theoretical technical perspective in order to provide the reader with the background necessary to correctly use and interpret the statistical analyses that will be presented subsequently Readers will then be presented with examples illustrating a particular concept e g reliability These examples will include a discussion of the particular analysis along with the SAS code necessary to conduct them The resulting output will then be discussed in detail focusing on the interpretation of the results Finally examples of how these results might be written up will also be included in the text It is hoped that this mixture of theory with examples of actual practice will serve the reader both as a pedagogical tool and as a reference work

Biometrical Studies and Quantitative Trait Loci Associated with Major Products of the Carotenoid Pathway of Carrot (*daucus Carota* L.) Carlos Antonio Fernandes Santos, 2001 Orange carrots are a top ranked vegetable in terms of pro vitamin A content Carotenoid pathway products were investigated in F2 populations from two different carrot crosses orange Brasilia x dark orange HCM and orange B493 x white wild QAL Broad sense heritabilities values for all carotenoids were greater than 90% in the B493 x QAL cross and from 35% to 70% among different carotenoids in the Brasilia x HCM cross The estimated number of factors was 4 for a carotene 3 for carotene and total carotenoids and one for carotene lycopene and phytoene in the orange x dark orange cross and 4 for a carotene 1 2 for lycopene and total carotenoids and 1 for the other carotenoids in the orange x white cross In comparison to the known biochemical pathways the correct order of substrates and products phytoene carotene lycopene was identified in the path analysis of β -carotene in the cross Brasilia x HCM but not in the correlation analysis Linkage grouping analysis assigned 287 and 250 scored molecular markers to the nine chromosomes of carrots at LOD scores ranging from 3.0 to 7.0 and the average marker spacing was 4.78 4.80 5.54 and 5.13 cM in 11 the Brasilia HCM B493 and QAL coupling phase maps respectively Interval mapping performed with the orange x dark orange cross detected four eight three one five and three putative QTL associated with accumulation of carotene α -carotene β -carotene lycopene phytoene and total carotenoids respectively with major QTL explaining from 10.2 to 13.0% of total phenotypic variation In the B493 x QAL population single marker analysis identified loci explaining 13.8% 6.8% 19.3% 5.7% 17.5% and 20.2% of total phenotypic variation for carotene α -carotene β -carotene lycopene phytoene and total carotenoids content respectively Overall analysis showed clustered loci affecting the phenotypic variation of carotenoid pathway suggesting clusters of related pathway loci as an evolutionary mechanism and supporting an adaptive evolutionary model suggested by H. A. Orr Path analysis and QTL studies suggested that phytoene biosynthesis perhaps associated with a root specific signal are the two key factors limiting the carotenoid pathway in roots of white carrots
