

2.OA.A.2 Determine whether a group of objects (up to 20) has an odd or even number of members, e.g., by pairing objects or counting them by 2s; write an equation to express an even number as a sum of two equal addends.

**Materials:** connecting cubes

**MP4 Model with mathematics.** Discuss with children that the term *pair* means “a set of two.”

*Beca has 8 toy cars. Can she arrange her cars in pairs on a shelf?*

Ask children to count out 8 connecting cubes to represent the number of cars Beca has. Show children how to arrange pairs of cubes on the top ten frame by placing vertical pairs of cubes on the ten frame from left to right.

• What is a pair of cubes? *a set of two cubes*  
Show me a pair of cubes. *Children hold up two cubes.*

• Can you arrange all 8 cubes in pairs? *yes*  
How many pairs are there in 8? *4 pairs*

Have each child remove his or her 8 cubes from the top ten frame. Then repeat the activity for 7 cubes.

• Can you arrange all 7 cubes in pairs? *no*  
Explain. *no; you can make 3 pairs and there is one cube left over.*

After children remove the 7 cubes, have them take 10 cubes and place vertical pairs of cubes in the top ten frame.

• How many pairs did you put on the ten frame? *5 pairs*  
Are all the cubes in pairs? *yes*

### Math Talk

**MP6 Attend to precision.** Use Math Talk to focus on children’s understanding of how some numbers are shown with pairs of cubes with no singles left, but other numbers are shown with pairs and have one single left.

### ELL

#### Strategy:

Elicit Prior Knowledge

Have children play a game before the lesson to bring out their prior knowledge about odd and even numbers.

- Divide children up into two groups: the **ODDS** and the **EVENs**.
- Take turns asking the teams to come up with examples of things that are *odd* and *even*. The **ODDS** have to come up with *odd* examples. The **EVENs** have to come up with *even* examples.
- Have the teams draw their examples on the board.

**Math Talk:** Possible answer: When you make pairs for 7, there is one extra cube left. When you make pairs for 10, there are no extra cubes left.

Chapter 1

**FOR THE TEACHER** • Read the following problems. Show how 8 toy cars can also put their pairs on pairs on a ten frame. Have children use pairs of cubes to show how you show 8 cubes. Discuss the activity for the numbers 7 and 10.

### Math Talk

#### Mathematical Practices

When you make pairs for 7 and for 10, how are these models different? Explain.

Series volume there were twenty eight lectures delivered by conference participants on a broad range of topics of current interest in operator algebras and operator theory This volume contains slightly expanded versions of most of those lectures Participants were encouraged to bring open problems to the conference and as a result there are over one hundred problems and questions scattered throughout this volume Readers will appreciate this book for the overview it provides of current topics and methods of operator algebras and operator theory

**Arithmetic Counts!** Paul Shoecraft,2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children s love of games songs and movement he s proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It s no lonver just their teacher s math It s their math America s children are being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not designed to remember things learned by rote when no longer practiced That s acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don t You know that to be true if you ve ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the number facts like  $5 + 7 = 12$ ,  $17 - 8 = 9$ ,  $6 \times 7 = 42$  and  $56 \div 7 = 8$  and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget
