Domains Matthew Taylor, 2009-05-19 In reinforcement learning RL problems learning agents sequentially execute actions with the goal of maximizing a reward signal The RL framework has gained popularity with the development of algorithms capable of mastering increasingly complex problems but learning difficult tasks is often slow or infeasible when RL agents begin with no prior knowledge The key insight behind transfer learning is that generalization may occur not only within tasks but also across tasks While transfer has been studied in the psychological literature for many years the RL community has only recently begun to investigate the benefits of transferring knowledge This book provides an introduction to the RL transfer problem and discusses methods which demonstrate the promise of this exciting area of research The key contributions of this book are Definition of the transfer problem in RL domains Background on RL sufficient to allow a wide audience to understand discussed transfer concepts Taxonomy for transfer methods in RL Survey of existing approaches In depth presentation of selected transfer methods Discussion of key open questions By way of the research presented in this book the author has established himself as the pre eminent worldwide expert on transfer learning in sequential decision making tasks A particular strength of the research is its very thorough and methodical empirical evaluation which Matthew presents motivates and analyzes clearly in prose throughout the book Whether this is your initial introduction to the concept of transfer learning or whether you are a practitioner in the field looking for nuanced details I trust that you will find this book to be an enjoyable and enlightening read Peter Stone Associate Professor of Computer Science

Enhancing Automated Decision-Making Through AI Hai-Jew, Shalin, 2024-12-05 Computational capabilities bring with them the advantages of cold logic precision speed data omniscience mass data processing capabilities multimodality enriched deployments and efficiencies With these many advantages people seek to offload work to machines Now with the major advances in artificial intelligence humanity is moving closer to handing over complex decision making to machines without humans in the direct loop Enhancing Automated Decision Making Through AI explores the processes of designing and deploying systems for automated decision making It also considers the implications of automated decision making informed by AI which can be unpredictable Covering topics such as agriculture disaster detection and tumor detection this book is an excellent resource for engineers systems designers instructors graduate and postgraduate students and more

Robot Shaping Marco Dorigo, Marco Colombetti, 1998 foreword by Lashon Booker To program an autonomous robot to act reliably in a dynamic environment is a complex task The dynamics of the environment are unpredictable and the robots sensors provide noisy input A learning autonomous robot one that can acquire knowledge through interaction with its environment and then adapt its behavior greatly simplifies the designer's work A learning robot need not be given all of the details of its environment and its sensors and actuators need not be finely tuned Robot Shaping is about designing and building learning autonomous robots The term shaping comes from experimental psychology where it describes the incremental training of animals The authors propose a new engineering discipline behavior engineering to provide the methodologies and tools for creating autonomous robots Their techniques are based on classifier systems a reinforcement learning architecture originated by John Holland to which they have added several new ideas such

as multiclass classifier system energy and dynamic population size In the book they present Behavior Analysis and Training BAT as an example of a behavior engineering methodology **Systems Analysis in Forest Resources** Michael Bevers, Tara M. Route and Operating Optimization of Maritime Vessels Using Machine Learning Techniques Mohammad Hossein Moradi, 2024-02-02 The shipping industry handles over 90% of the global trade volume and is responsible for approximately 3% of global CO₂ emissions Meanwhile trade by the shipping industry is expected to increase by up to 130% by 2050 compared to 2008 At the same time the goal is to reduce Green House Gas GHG emissions from the shipping industry to half of the 2008 level by 2050 In support of this goal this thesis is concerned with a comprehensive approach for optimizing the ship's operation i.e. an optimization approach that simultaneously involves route selection energy management propeller pitch and engine control In addition this thesis also analyses the application of wind propulsion systems The optimization of the ship's operation is implemented in the form of Reinforcement Learning RL methods The use of RL based methods to simultaneously optimize various aspects of the ship's trajectory and controls is a novel approach compared to the current state of art and embodies this thesis inherent innovation The results specifically highlight the importance of parallelizing

route optimization with the optimization of other control aspects Ultimately it is found that the solution emanating from a purely RL based approach can be further enhanced when the optimized route speed and power profiles are used to perform individual DP based optimizations on the energy management in a post processing step *Social, Cultural, and Behavioral Modeling* Robert Thomson, Halil Bisgin, Christopher Dancy, Ayaz Hyder, Muhammad Hussain, 2020-10-10 This book constitutes the proceedings of the 13th International Conference on Social Cultural and Behavioral Modeling SBP BRiMS 2020 which was planned to take place in Washington DC USA Due to the COVID 19 pandemic the conference was held online during October 18 21 2020 The 33 full papers presented in this volume were carefully reviewed and selected from 66 submissions A wide number of disciplines are represented including computer science psychology sociology communication science public health bioinformatics political science and organizational science Numerous types of computational methods are used such as machine learning language technology social network analysis and visualization agent based simulation and statistics

Handbook of Research on Complex Dynamic Process Management: Techniques for Adaptability in Turbulent Environments Wang, Minhong, Sun, Zhaohao, 2009-07-31 Investigates the nature and history of dynamic processes essential to understanding the need for flexibility and adaptability as well as the requirements to improve solutions **Nonlinearity, Bounded Rationality, and Heterogeneity** Tamotsu Onozaki, 2018-01-28 This book pursues a nonlinear approach in considering both chaotic dynamical models and agent based simulation models of economics as well as their dynamical behaviors Three key concepts arising in this context are nonlinearity bounded rationality and heterogeneity which also make up the title of the book Nonlinearity is the warp that runs throughout all models because systems that exhibit chaotic or other complex behavior in the absence of any exogenous disturbances are absolutely nonlinear Bounded rationality constitutes the woof because economic systems do not exhibit complex behavior if all agents are perfectly rational as is usually assumed in neoclassical economics Agents who are boundedly rational have to struggle to do their best with limited information and tend to adapt to their economic environment without knowing what is the best Furthermore the heterogeneity of firms or consumers dyes the fabric of complex dynamics woven from the warp and woof
