Neutrino Oscillations And Their Origin - Proceedings Of The Fifth International Workshop Yoichiro

Suzuki, Masayuki Nakahata, Shigetaka Moriyama, Yusuke Koshio, 2005-06-23 This volume brings together international experts in diverse areas of physics to discuss recent progress in the experimental and theoretical study of neutrino oscillations. Readers are brought up to date with the latest developments in important neutrino experiments and the associated progress in theory is summarized. The principal projects worldwide such as Super Kamiokande, SNO, KamLAND are considered and contributions also report on future experiments including JPARC OPERA and MINOS. Several other related topics such as dark matter, double beta decay, lepton flavor violation and cosmology are discussed, reflecting the wide ranging specializations of many contributors outside of pure neutrino physics.

Structure and Dynamics of Solutions Hideyuki Ohtaki, H. Yamatera, 2013-10-22 Recent advances in the study of structural and dynamic properties of solutions have provided a molecular picture of solute-solvent interactions. Although the study of thermodynamic as well as electronic properties of solutions have played a role in the development of research on the rate and mechanism of chemical reactions, such macroscopic and microscopic properties are insufficient for a deeper understanding of fast chemical and biological reactions. In order to fill the gap between the two extremes, it is necessary to know how molecules are arranged in solution and how they change their positions in both the short and long range. This book has been designed to meet these criteria. It is possible to develop a sound microscopic picture for reaction dynamics in solution without molecular level knowledge of how reacting ionic or neutral species are solvated and how rapidly the molecular environment is changing with time. A variety of actual examples is given as to how and when modern molecular approaches can be used to solve specific solution problems. The following tools are discussed: x-ray and neutron diffraction, EXAFS and XANES, molecular dynamics and Monte Carlo computer simulations, Raman, infrared, NMR, fluorescence and photoelectron emission spectroscopic methods, conductance and viscosity measurements, high pressure techniques and statistical mechanics methods. Static and dynamic properties of ionic solvation, molecular solvation, ion pair formation, ligand exchange reactions and typical organic solvents are useful for bridging the gap between classical thermodynamic studies and modern single molecule studies in the gas phase. The book will be of interest to solution physical, inorganic, analytical and structural chemists as well as to chemical kineticists.

New Developments and New Applications in Animal Cell Technology Otto-Wilhelm Merten, Pierre Perrin, Bryan Griffiths, 2007-05-08 Animal cell technology is becoming an increasingly important part of biotechnology and many products are now used in human health care and for veterinary applications. However, there are many times more products actually in the developmental pipelines of the biotechnology industry, including various phases of clinical trials. The Proceedings of the 15th Meeting of the European Society for Animal Cell Technology, Tours, France.

September 1997 presents the actual current state as well as New Developments and Applications in Animal Cell Technology for the benefit of society These Proceedings represent both the current state and applications of animal cell technology and the way the technology is expanding into new areas to give a unique insight into new products and applications for human and animal health care

Investigation of the Hydraulics of Horizontal Drains in Plumbing Systems Robert S. Wyly, 1964 Results are reported from an investigation of the hydraulics of flow in experimental apparatus simulating nominally horizontal simple and branching drains of plumbing systems The data are correlated with limited findings in an earlier unpublished NBS study the results of which have been utilized in current plumbing codes The need for further research is pointed out particularly in relation to hydraulic

Advanced Biological Treatment Processes Lawrence K. Wang,Nazih K. Shammash,Yung-Tse Hung,2010-03-10 The past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken *Activating Agents and Protecting Groups* Anthony J. chemists the editors of The Encyclopedia of Reagents for Organic Synthesis EROS have developed a list of the most important and useful reagents employed in the field conveniently presented in four separate volumes The reagents included in this volume reflect the fact that protecting groups and activation procedures are often used in combination There are many instances in the synthesis of natural and unnatural products pharmaceuticals oligosaccharides and oligonucleotides etc where similar tactics must be employed to prevent undesired activation or reaction of functionality Accordingly the most important reagents used to protect amines alcohols carboxyl carbonyl and other reactive functional groups are included in this volume The list of activating agents includes well known reagents that activate functional groups for substitution or elimination reactions as well as less traditional examples e g HMPA used to activate enolates and alkyllithium reagents to increase the nucleophilicity Each article contains all of the information found in EROS as well as expanded related reagents listings and additional references to enable the reader to quickly access a broad range of information that is beyond the scope of the reagent entries themselves This text will prove an invaluable resource
