There have been many important changes in the participation of women and men in American society over the past quarter century Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men They aid the learning process and reflect inequalities in opportunity to learn and participate In addition they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students educational programs and a wide range of issues For all of these reasons it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired The test performance of women and men is a research topic of historical interest and has received much attention in recent years Because of this increased interest there is a great deal of new research and data available The purpose of the study presented in this volume was to review this new information with two objectives in mind to clarify patterns of gender difference and similarity in test performance and related achievements and to see what implications those findings might have for fair assessment and as a corollary examine the assessment process as a possible source of gender differences This study is interested in tests used in education to assess developed knowledge and skill In order to gain a broader view of gender similarity and difference the contributors looked at other types of measures and other characteristics of young women and men Their hope is to contribute to a firmer basis for insuring fairness in tests an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience

about education and education reform from how to close the achievement gap in public schools to admission standards for top universities In this explosive book Howard Wainer uses statistical evidence to show why some of the most widely held beliefs in education today and the policies that have resulted are wrong He shows why colleges that make the SAT optional for applicants end up with underperforming students and inflated national rankings and why the push to substitute achievement tests for aptitude tests makes no sense Wainer challenges the thinking behind the enormous rise of advanced placement courses in high schools and demonstrates why assessing teachers based on how well their students perform on tests a central pillar of recent education reforms is woefully misguided He explains why college rankings are often lacking in hard evidence why essay questions on tests disadvantage women why the most grievous errors in education testing are not made by testing organizations and much more No one concerned about seeing our children achieve their full potential can afford to ignore this book With forceful storytelling wry insight and a wealth of real world examples Uneducated Guesses exposes today s educational policies to the light of empirical evidence and offers solutions for fairer and more viable future policies AFPTRC-TR ,1954 Psychiatric Index for Interdisciplinary Research ,1964
