de cercetare pe care o folosesc apoi pe parcursul lucrării. Consider că această abordare oferă o nouă perspectivă asupra modului în care au evoluat în timp conceptul de gravitație și metodele de testare a fiecărei teorii a gravitației prin observații și experimente. Argumentez pe baza metodologiei programelor de cercetare și a studiilor oamenilor de știință și filosofilor că actualele teorii ale gravitației cuantice sunt degenerative datorită lipsei dovezilor experimentale pe o perioadă îndelungată de timp și a autoimunității împotriva posibilității falsificării. Mai mult, în prezent este în curs de dezvoltare un curent metodologic care atribuie un rol secundar neimportant verificărilor prin observații și sau experimente. Din această cauză nu va fi posibil o teorie completă a gravitației cuantice în forma actuală care să includă la limit relativitatea generală, întrucât teoriile fizice au fost dintotdeauna ajustate în decursul evoluției lor pe baza testelor observaționale sau experimentale și verificate prin predicțiile făcute. De asemenea, contrar unei opinii răspândite și a unor programe active actuale privind unificarea tuturor forțelor fundamentale ale fizicii într-o singură teorie finală pe baza teoriei corzilor, argumentez că este puțin probabil în general să se realizeze această unificare și nu este posibil oricum ca unificarea să se elaboreze pe baza teoriilor actuale ale gravitației cuantice inclusiv prin teoria corzilor, în plus sus în punctele de vedere ale unor oameni de știință și filosofi că în prezent se consumă mult prea multe resurse pe ideea dezvoltării teoriilor gravitației cuantice și în special teoria corzilor care să includă relativitatea generală și să unifice gravitația cu celelalte forțe în condițiile în care știința nu impune astfel de programe de cercetare.
