Nature-based Solutions for Resilient Ecosystems and Societies Shalini Dhyani, Anil Kumar Gupta, Madhav Karki, 2020-07-07 Over the past few decades the frequency and severity of natural and human induced disasters have increased across Asia. These disasters lead to substantial loss of life, livelihoods and community assets which not only threatens the pace of socio-economic development but also undo hard earned gains. Extreme events and disasters such as floods, droughts, heat, fire, cyclones and tidal surges are known to be exacerbated by environmental changes including climate change, land use changes and natural resource degradation. Increasing climate variability and multi-dimensional vulnerabilities have severely affected the social, ecological and economic capacities of the people in the region who are economically speaking those with the least capacity to adapt. Climatic and other environmental hazards and anthropogenic risks coupled with weak and wavering capacities severely impact the ecosystems and Nature's Contributions to People (NCP) and thereby to human well-being. Long-term resilience building through disaster risk reduction and integrated adaptive climate planning therefore has become a key priority for scientists and policymakers alike. Nature-based Solutions (NbS) is a cost-effective approach that utilizes ecosystem and biodiversity services for disaster risk reduction and climate change adaptation while also providing a range of co-benefits like sustainable livelihoods and food, water and energy security. This book discusses the concept of Nature-based Solutions (NbS) both as a science and as art and elaborates on how it can be applied to develop healthy and resilient ecosystems locally, nationally, regionally and globally. The book covers illustrative methods and tools adopted for applying NbS in different countries. The authors discuss NbS applications and challenges, research trends and future insights that have wider regional and global relevance. The aspects covered include landscape restoration, ecosystem-based adaptation, ecosystem-based disaster risk reduction, ecological restoration, ecosystem-based protected areas management, green infrastructure development, nature-friendly infrastructure development in various ecosystem types, agro-climatic zones and watersheds. The book offers insights into understanding the sustainable development goals (SDGs) at the grass roots level and can help indigenous and local communities harness ecosystem services to help achieve them. It offers a unique essential resource for researchers, students, corporations, administrators and policymakers working in the fields of the environment, geography, development, policy, planning, the natural sciences, life sciences, agriculture, health, climate change and disaster studies.

Men, Masculinities and Disaster Elaine Enarson, Bob Pease, 2016-06-17 In the examination of gender as a driving force in disasters too little attention has been paid to how women's or men's disaster experiences relate to the wider context of gender inequality or how gender justice practice can help prevent disasters or address climate change at a structural level. With a foreword from Kenneth Hewitt and an afterword from Raewyn Connell and contributions from renowned international experts this book helps address the gap. It explores disasters in diverse environmental, hazard, political and cultural contexts through original research and theoretical reflection building on the under-utilized orientation of critical men's studies. This body of thought not previously applied in disaster contexts.

explores how men gain maintain and use power to assert control over women Contributing authors examine the gender terrain of disasters through men s eyes considering how diverse forms of masculinities shape men s efforts to respond to and recover from disasters and other climate challenges The book highlights both the high costs paid by many men in disasters and the consequences of dominant masculinity practices for women and marginalized men It concludes by examining how disaster risk can be reduced through men s diverse efforts to challenge hierarchies around gender sexuality disability age and culture IoT and WSN based Smart Cities: A Machine Learning Perspective Shalli Rani,Vyasa Sai,R.
