Gencer, 2013-06-19 Natural disasters are increasingly affecting the world taking lives unexpectedly and leaving many others injured and homeless Moreover disasters disrupt local national and even global economies instantly changing the direction of development In the first half of 2011 alone 108 natural disasters occurred killing over 23 thousand people affecting nearly 44 million others and causing more than 253 billion US dollars of economic damages CRED 2011 1 Large urban settlements have become increasingly vulnerable to the impacts of natural disasters The concentration of substandard infrastructure and housing material assets and inherent socio economic inequalities increase vulnerability to disasters in large urban areas especially in developing countries The size number functions and geographical distribution of large and megacities create a special concern for disaster risk Good urban management practices can be a powerful catalyst for reducing losses from natural disasters while simultaneously helping to develop a sustainable environment Yet the existing situation indicates that sustainable planning and risk management measures are not taken into consideration or may not be put into practice for a variety of financial political and social reasons This book argues that on one hand socio economic disparities resulting from unsustainable urban development can increase vulnerability to natural hazards and on the other hand when paired with natural hazards this increased vulnerability can negatively affect urban areas resulting in further inequality This book will showcase this argument with theoretical reviews and quantitative analyses on the interplay between sustainable development and disaster vulnerability as well as an in depth case study of the role of urban planning and risk management practices in creating the socio economic and spatial vulnerabilities and predicted earthquake risk in the megacity of Istanbul *Encyclopedia of Environmental Change* John A Matthews, 2013-12-13 Accessibly written by a team of international authors the Encyclopedia of Environmental Change provides a gateway to the complex facts concepts techniques methodology and philosophy of environmental change This three volume set illustrates and examines topics within this dynamic and rapidly changing interdisciplinary field The encyclopedia includes all of the following aspects of environmental change Diverse evidence of environmental change including climate change and changes on land and in the oceans Underlying natural and anthropogenic causes and mechanisms Wide ranging local regional and global impacts from the polar regions to the tropics Responses of geo ecosystems and human environmental systems in the face of past present and future environmental change Approaches methodologies and techniques used for reconstructing dating monitoring modelling projecting and predicting change Social economic and political dimensions of environmental issues environmental conservation and management and environmental policy Over 4 000 entries explore the following key themes and more Conservation Demographic change Environmental

management Environmental policy Environmental security Food security Glaciation Green Revolution Human impact on environment Industrialization Landuse change Military impacts on environment Mining and mining impacts Nuclear energy Pollution Renewable resources Solar energy Sustainability Tourism Trade Water resources Water security Wildlife conservation The comprehensive coverage of terminology includes layers of entries ranging from one line definitions to short essays making this an invaluable companion for any student of physical geography environmental geography or environmental sciences
