Operation Manual

Specifications and Functions of the Suzuki Diagnosis System

- (1) A. The dedicated software of this diagnosis system runs on a standard personal computer (PC) under Windows 7 and 8.
The PC-side software performs failure diagnosis by communicating with the onboard computer through SDS-II that translates and converts the signals from the PC via the dedicated communication cable.
B. The SDS-II-side software allows the SDS-II to perform failure diagnosis independently by communicating with the onboard computer via the dedicated communication cable.
C. Similar to B, the SDS-II-side software allows the SDS-II to record data independently by communicating with the battery via the battery cable, and with the onboard computer via the dedicated communication cable.
The above three software A, B, and C are available.
- (2) The SDS-II dedicated software is compatible with eleven languages: Japanese, English, French, German, Italian, Spanish, Greek, Portuguese, Chinese (simplified), Thai, and Indonesian.
- (3) To use the SDS-II software, activation is required using an access key that can be obtained by purchasing the license. Just installing the software does not allow you to use the software.
- (4) Data from various sensors at the time of engine start and stop can be displayed or graphed in real time, and the displayed data and graphs can be saved and printed out.
- (5) The types of data to be displayed can be selected.
- (6) Saved data can be redisplayed and graphed (only with the PC-side software).
- (7) Failure codes (past and present) recorded at the time of a failure can be called up and displayed.
Also, the record of changes in data (only two events) at the time of a failure can be displayed.
- (8) A **"Trigger"** can be set for data (only with the PC-side software). Trigger is a function that records data from the point when the preset value of one or more types of data is exceeded (or not met), or to record the failure code display timing on the monitoring graph screen.
- (9) The SDS-II can perform active control independently (resetting ISC learned values etc.).
- (10) With the data recorder function of C in (1), approx. 5,000 hours (varies with the model) of operation data or travel data can be recorded, read, and verified using an 4 GB SD card.
- (11) The diagnosis system requires the setup of additional functions and the use of dedicated connectors for the onboard ECU. The system supports new models, such as AN 650, introduced after May 2002 and does not support models that were produced prior to that time.

Simplified Signs: A Manual Sign-Communication System for Special Populations, Volume 1. John D. Bonvillian, Nicole Kissane Lee, Tracy T. Dooley, Filip T. Loncke, 2020-07-30. Simplified Signs presents a system of manual sign communication intended for special populations who have had limited success mastering spoken or full sign languages. It is the culmination of over twenty years of research and development by the authors. The Simplified Sign System has been developed and tested for ease of sign comprehension, memorization, and formation by limiting the complexity of the motor skills required to form each sign and by ensuring that each sign visually resembles the meaning it conveys. Volume 1 outlines the research underpinning and informing the project and places the Simplified Sign System in a wider context of sign usage historically and by different populations. Volume 2 presents the lexicon of signs totalling approximately 1000 signs each with a clear illustration and a written description of how the sign is formed, as well as a memory aid that connects the sign visually to the meaning that it conveys. While the Simplified Sign System originally was developed to meet the needs of persons with intellectual disabilities, cerebral palsy, autism, or aphasia, it may also assist the communication needs of a wider audience such as healthcare professionals, aid workers, military personnel, travellers, or parents and children who have not yet mastered spoken language. The system also has been shown to enhance learning for individuals studying a foreign language. Lucid and comprehensive, this work constitutes a valuable resource that will enhance the communicative interactions of many different people and will be of great interest to researchers and educators alike.
