**In Pursuit**  
In all, about 1,000 dragonfly species live in the world today. Dragonflies are one of the most ancient and successful insects on earth. They have been around for over 300 million years. They are found in almost every part of the world. They are also one of the most successful predators in the world. They can fly very fast and can catch their prey with great accuracy. They are also very resilient and can survive in a wide range of environments. They are a very important part of the ecosystem and are a great example of the power of nature.

**Flying Colours, Super Senses**  
One of the most amazing things about dragonflies is their eyes. They have two large eyes on the sides of their head, which gives them a 360-degree field of vision. They can also see ultraviolet light, which is invisible to most other animals. This gives them a huge advantage when it comes to finding their prey. They can also see the colour of their prey, which helps them to choose the best food. Their eyes are also very sensitive to movement, which means they can catch even the smallest insects. This makes them one of the most successful predators in the world.
