

Chapter 1 Outline

02.03.23

- Some would start to tell the story of the history of psychology with:
 - Ancient Greece.
 - Demarcation in the late 19th century when science of psychology was formally proposed and instituted

Psychology in America

- The history of psychology provides perspective instead of just name and dates. It tells us about the important intersection of time and place that defines who we are.
- Getting a history of the field helps to make sense of where we are and how we got here.

A Prehistory of Psychology

- John Locke (1632-1704) and Thomas Reid (1710-1796) promoted empiricism, the idea that all knowledge comes from experience.
- Their work and others as well, emphasized the role of the human observer and the primacy of the senses in defining how the mind comes to acquire knowledge.
- In the early 1800s, American colleges and universities taught these principles as courses on mental and moral philosophy.

Physiology and Psychophysics

- German physiologist Hermann von Helmholtz (1821-1894) measured the speed of the neural impulse and explored the physiology of hearing and vision.
 - Helmholtz work indicated that our senses can deceive us and are not a mirror of the external world.
- Science of psychology was feasible.
- Though not a new idea, Helmholtz's work implied that there is a psychological reality and a physical

reality and that the two are not identical.

- German researchers Ernst Weber and Gustav Fechner named their work psychophysics, which was an investigation of the relationship between the mental (experiences of the senses) and the material (external reality).
 - Their work introduced methods for measuring the relationship between physical stimuli and human perception that would later serve as the basis for the new science of psychology.
- German physician, physiologist and philosopher Wilhelm Wundt (1832-1920) is credited as the formal developer of modern psychology.
 - Wundt helped establish the field of experimental psychology by promoting, providing classes, textbooks and a laboratory for training students.
 - Students were trained to offer detailed self-reports of their reactions to various stimuli, a procedure known as introspection.
 - In addition to the study of sensation and perception, research was done on mental chronometry, more commonly known as reaction time.
 - The work of Wundt and his students demonstrated that the mind could be measured and the nature of consciousness could be revealed through scientific means.
 - 4 years later this work lead to the first psychology laboratory to be opened in America.

Reading for Understanding is a monumental achievement. It was a monumental achievement when it came out as a first edition in 1999 bringing years of rigorous reading research together in a framework for teaching that made sense in actual secondary school classrooms. Now just thirteen years later Schoenbach and Greenleaf have several randomized clinical trials and multiple on going studies at their fingertips to demonstrate the effects of this approach for developing the reading and thinking of young people in our nation's middle and high school classrooms as well as in community college classrooms. Their careful work on developing disciplinary literacy among all students represents a passion for and commitment to supporting students and their teachers in reading for understanding which translates to reading for enjoyment, self awareness, learning and for purposeful and informed action in our society.

Elizabeth Moje, Arthur F. Thurnau, Professor and Associate Dean for Research School of Education, University of Michigan, Reading Apprenticeship has proven to be an inspiration to Renton Technical College faculty and students alike. They have learned together to view themselves as readers in transformative ways as they embrace powerful techniques to increase reading comprehension. Steve Hanson, President, Renton Technical College, Renton, Washington, Reading for Understanding has the finest blend I have seen of research strategies and classroom vignettes to deepen teacher learning and help them connect the dots between theory and practice.
