E-Book Joseph E. Pizzorno, Michael T. Murray, 2020-06-26 Selected for Doody's Core Titles 2024 with Essential Purchase designation in Complementary Integrative Health *Disorders of Lipid Metabolism* G.V. Marinetti, 2012-12-06 For the past

30 years I have been teaching lipid biochemistry to medical students, graduate students and undergraduate students. The major topics covered in my courses were fatty acids, prostaglandins, leukotrienes, phospholipids, glycolipids, triacylglycerols, cholesterol, bile acids and plasma lipoproteins. Emphasis was placed on the regulation and disorders of lipid metabolism. The latter included hyperlipidemias, atherosclerosis and alcohol induced liver damage. In this volume I have chosen to focus on the disorders of lipid metabolism at a level appropriate both for medical students and for graduate and undergraduate students majoring in the biological sciences. The biochemistry, nutrition, genetics and cell biology aspects of lipids and lipid metabolism will be covered as they relate to lipid disorders. I am not aware of any textbook that integrates the disorders of lipid metabolism in this manner. Chapter 1 includes a brief discussion of the basic structures, properties and metabolism of lipids. This chapter is not very detailed since the material covered is available in basic textbooks on biochemistry. The major focus of this volume is the various lipid disorders with emphasis on polyunsaturated fatty acids, the molecular biology and pathogenesis of the hyperlipidemias, dietary and drug therapy for the hyperlipidemias and alcohol induced liver damage. The material presented has been obtained from several textbooks on biochemistry and from a variety of recent articles in the scientific literature.

Biochemical Changes during the Human Lifespan Inês Lopes Cardoso, Fernanda Leal, Catarina Lemos, 2020-07-03

Throughout life human beings undergo several hormonal changes responsible for growth and maturation. These alterations in hormone secretion include enhanced or decreased production, the latter of which is mainly observed during aging. These processes are intrinsic to human development but may vary from individual to individual. Thus, experienced metabolic changes can alter the state of health and even trigger the development of certain pathologies. The main metabolic differences observed in newborns and children when compared to adults result from the fact that the organism is not yet fully developed. During adolescence, changes in hormone secretion occur that lead to sexual maturation. In the same way, during pregnancy, women suffer alterations in the secretion of certain hormones which allow the adaptation of their bodies to that physiological state and the normal development of the foetus. As for the elderly, a general decline of health is observed during ageing and hormonal dysfunctions such as the development of insulin resistance and thyroid dysfunction frequently occur. This volume focuses on metabolic and hormonal changes during the human lifetime. Screenings best suited for each life stage, the reasons for doing them and the diseases they allow the diagnosis of are also presented.

Phosphate Labeling and Sensing in Chemical Biology Henning Jacob Jessen, 2017-07-08. The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging, which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field.
