Handbook of Survey Methodology for the Social Sciences Lior Gideon, 2012-06-21 Surveys enjoy great ubiquity among data collection methods in social research; they are flexible in questioning techniques in the amount of questions asked, in the topics covered and in the various ways of interactions with respondents. Surveys are also the preferred method by many researchers in the social sciences due to their ability to provide quick profiles and results. Because they are so commonly used and fairly easy to administer, surveys are often thought to be easily thrown together. But designing an effective survey that yields reliable and valid results takes more than merely asking questions and waiting for the answers to arrive. Geared to the non-statistician, the Handbook of Survey Methodology in Social Sciences addresses issues throughout all phases of survey design and implementation. Chapters examine the major survey methods of data collection, providing expert guidelines for asking targeted questions, improving accuracy and quality of responses while reducing

sampling and non sampling bias Relying on the Total Survey Error theory various issues of both sampling and non sampling sources of error are explored and discussed By covering all aspects of the topic the Handbook is suited to readers taking their first steps in survey methodology as well as to those already involved in survey design and execution and to those currently in training Featured in the Handbook The Total Survey Error sampling and non sampling errors Survey sampling techniques The art of question phrasing Techniques for increasing response rates A question of ethics what is allowed in survey research Survey design face to face phone mail e mail online computer assisted Dealing with sensitive issues in surveys Demographics of respondents implications for future survey research Dealing with nonresponse and nonresponse bias The Handbook of Survey Methodology in Social Sciences offers how to clarity for researchers in the social and behavioral sciences and related disciplines including sociology criminology criminal justice social psychology education public health political science management and many other disciplines relying on survey methodology as one of their main data collection tools

Sustainability in Practice Walter Leal Filho, Fernanda

Frankenberger, Ubirata Tortato, 2023-09-15 Sustainability is now a widely spread concept and much progress has been achieved since the 1970s when it started to be widely discussed. At present many international organizations and scientists are active in implementing sustainable development as a whole and the UN Sustainable Development Goals (SDGs) in particular. Nevertheless the main research agenda is being led by some countries providing a good opportunity for other nations and regions which have not yet been so active to bring their viewpoints to the global discussion. One of these regions is Latin America. Consistent with the need for more cross sectorial and cross cultural interactions among the various stakeholders working in the field of sustainability in Latin America and beyond this book pursues two main aims: a) to provide research institutions, universities, NGOs, government agencies and enterprises from the region with an opportunity to present their works in the field of sustainability and b) to document and promote ideas and experiences acquired in the execution of sustainability projects, especially successful initiatives and good practice across the Latin America region. Last but not least a further aim of the book is to present methodological approaches and experiences deriving from case studies and projects which aim to show how sustainability may be enhanced in practice.

The SAGE Encyclopedia of Corporate Reputation Craig E. Carroll, 2016-05-04 What creates corporate reputations and how should organizations respond? Corporate reputation is a growing research field in disciplines as diverse as communication management, marketing, industrial and organizational psychology and sociology. As a formal area of academic study it is relatively young with roots in the 1980s and the emergence of specialized reputation rankings for industries, products, services and performance dimensions and for regions. Such rankings resulted in competition between organizations and the alignment of organizational activities to qualify and improve standings in the rankings. In addition today's changing stakeholder expectations, the growth of advocacy demand for more disclosures and greater transparency and globalized, mediatized environments create new challenges, pitfalls and opportunities for organizations. Successfully engaging, dealing with and working through reputational challenges requires an understanding of options and tools for organizational decision making and stakeholder engagement. For the first time the vast and important field of corporate reputation is explored in the format of an encyclopedic reference. *The SAGE Encyclopedia of Corporate Reputation* comprehensively overviews concepts and techniques for identifying, building, measuring, monitoring, evaluating, maintaining, valuing, living up to and/or changing corporate reputations. Key features include 300 signed entries, are organized in A to Z fashion in 2 volumes, available in a choice of electronic or print formats. Entries conclude with Cross References and Further Readings to guide students to in-depth resources. Although organized A to Z a thematic Reader's Guide in the front matter groups related entries by broad areas. A Chronology provides historical perspective on the

development of corporate reputation as a discrete field of study A Resource Guide in the back matter lists classic books key journals associations websites and selected degree programs of relevance to corporate reputation A General Bibliography will be accompanied by visual maps noting the relationships between the various disciplines touching upon corporate reputation studies The work concludes with a comprehensive Index which in the electronic version combines with the Reader's Guide and Cross References to provide thorough search and browse capabilities *UGC NET Paper 2 _ Public*
