Introductory Psychology provides introductory psychology instructors with teaching ideas and activities that can immediately be put into practice in the classroom. It contains an organized collection of articles from *Teaching of Psychology* (TOP), the official journal of the Society for the Teaching of Psychology, Division 2 of the American Psychological Association. Volume III contains 89 articles from TOP that have not been included in other volumes. Another distinction between this volume and its predecessors is its emphasis on testing and assessment. The book is divided into two sections. Section One, *Issues and Approaches in Teaching Introductory Psychology*, contains 52 articles on critical issues such as how to approach the course, understanding students' interests, perceptions, and motives; students' existing knowledge of psychology, including their misconceptions; a comparison of introductory textbooks and tips on how to evaluate them; test questions and student factors affecting exam performance; an overview of different forms of feedback; giving extra credit; and how to deal with academic dishonesty. Section Two consists of 37 articles that present demonstrations, class and laboratory projects, and other techniques to enhance teaching and learning in both the introductory as well as advanced courses in the discipline. This section is organized so as to parallel the order of topics found in most introductory psychology textbooks. Intended for academicians who teach the introductory psychology course and/or oversee grad assistants who teach the course, all royalties of the book go directly to the Society for the Teaching of Psychology to promote its activities to further improve the teaching of psychology.

Psychology James S. Nairne, 2002-07. The new edition of James Nairne's highly respected text offers all the content, pedagogy, and visual appeal that professors and students have come to expect from a successful introductory psychology text. The third edition offers a comprehensive look at how psychology works in our everyday lives. This practical, motivating text presents the standard subjects covered in an introductory course but connects them in a way that adds meaning and consistency to students' study of psychology. How does he do this? By introducing students to the adaptive mind, a theme based on the fact that our thoughts and actions stem from our need to adapt to our surroundings. This unique framework supports practical applications and helps students understand how we use psychology to deal with everyday challenges. Nairne emphasizes the ways particular behaviors, thought processes, and emotions help us solve problems, from memorizing a telephone number to ducking under cover as a building begins to shake, to producing a quick physical response in the face of traffic hazards. Beneath the innovative approach, you'll find ample coverage of all the traditional topics around which you build your course.
