

Abstract

This chapter presented a preliminary approach to ecological assessment. Although this chapter thoroughly presents aspects that underlie the protocol of PELAGOS, also that it is a conceptual adaptation to what is done in "Contextual Water Audit" (see in Chapter 4). However, subsequent studies might emphasize a more comprehensive assessment that not only looks beyond the limits of a limited set of indicators. Considerable efforts will still exist and exist, by applying relevant strategies to different parameters.

Abstract

This report presents all programs, selected quality award recipients and other organizations that are participating in the program this fall.

Each spinal cell has on its apical surface one or more processes (axons or dendrites), the somatodendritic process. Characteristically, the soma (cell body) is situated between the axonal process and the dendritic process, which is called the somatodendritic axis.

[illegible]

It was common that participants had no differences in psychological stress due to the sport training between school and after-school. For that reason, after-school activities should be taken into account when we do research on stress. Thus, I would like to continue to study on related issues (see Fig. 2).

Vapor Pressures of Various Compounds at Low Temperatures G. A. Burrell, I. W. Robertson, 1916 **Science Citation Index**, 1992 Vols for 1964 have guides and journal lists **Vapor Pressure Curves** W. N. Holmes, 1913 THE VAPOR PRESSURES OF 30 INORGANIC LIQUIDS BETWEEN ONE ATMOSPHERE AND THE CRITICAL POINT., 1963 Literature values of the vapor pressures of H₂, HD, D₂, N₂, O₂, Ne, Ar, Kr, Xe, CO, NO, CH₄, N₂O, CO₂, HCl, HBr, HI, SF₆, H₂S, Cl₂, Br₂, NH₃, C₂H₂, SO₂, SO₃, COCl₂, HF, HCN, N₂O₄, CCl₄ and SnCl₄ were compared with the Kirchhoff formula $\log P = A + \frac{B}{T - B}$ between the normal boiling point and the critical point where A and B are determined for each liquid. Plots are presented of the deviations computed by the equation $\log \frac{P}{P^*} = \frac{A}{T - B} - \frac{A}{T_b - B}$. Based on accurately determined curves for 17 of these substances empirical hypotheses were developed to allow the prediction of the most probable course of the deviation curve in cases where the data appeared to be unreliable. In addition where precise data were available the possibility of the existence of fine structure curvature was demonstrated. The deviation curves were used to obtain tables of interpolated vapor pressure values which are in most cases more accurate by one order of magnitude than any now in the literature particularly where smoothed regression curves do not discriminate between random experimental errors and systematic deviations of an arbitrarily chosen formula from the real vapor pressure curve. Since the deviation curve is invariably shown to approach the zero ordinate at the critical point with a large negative slope the correspondence between the critical pressure and temperature is fixed with a high degree of confidence. A particular result of this work is that the critical pressure of NH₃ was shown to be about one atmosphere higher than the presently accepted value. The new values for the critical points of CH₄, C₂N₂, HCN and Br₂ also resolved differences existing between various authorities in the literature. auth **The Vapor Pressures of Aqueous Solutions of Electrolytes** Edward Otto Heuse, 1915 *Vapor Pressure Curves for C, Ni, Fe, Cr, Mo, W, Cu, Ta, and Al Over the Pressure Range from 10–10 ATM to 1 ATM* A. Penski, 1992 A method of fitting vapor pressure temperature data to the Antoine equation is described along with a detailed statistical analysis of the fits and calculations of vapor pressures, enthalpies of vaporization, volatilities, concentration of saturated vapors and boiling points with the Antoine constants. It is shown that the number of digits required to accurately perform vapor pressure calculations is greater than previously believed. The system permits calculation of the limits of error for any level of confidence. A program is used to analyze and plot the available vapor pressure data for diethyl malonate.
