R.B. Abel,S. Connell,N. Della Croce,2002-11-01 Arising out of The Third International Symposium held in New Jersey this book represents the state of the art in ocean management From the Baltic to the Caribbean from the Adriatic to the Atlantic the problems of ocean management are fully discussed and proposals made to meet the challenges of the next decade This book will be of immense interest and use to anyone working in coastal and ocean management and is an invaluable work reference      *Basic and Applied Phytoplankton Biology* Perumal Santhanam,Ajima Begum,Perumal Pachiappan,2018-07-23 This book presents the latest developments and recent research trends in the field of plankton highlighting the potential ecological and biotechnological applications It critically and comprehensively discusses strain selection growth characteristics large scale culturing and biomass harvesting focusing on the screening and production of high value products from algae and evaluating carbon dioxide sequestration from fuel gas as a climate change mitigation strategy The latter areas of research are clearly central to the sustainable development approach that is currently attracting global attention Over the decades much of the literature on has focused on the biological and ecological aspects of phytoplankton found in freshwater marine and brackish water environments However these organisms are known to also inhabit various other environments More recently there has been a substantial shift toward the concept of sustainable development and the green economy with emphasis on exploiting biological systems for the benefit of mankind The significance of these plankton cannot be underestimated as they contribute approximately 40% of the oxygen in the atmosphere Therefore there is potential for exploitation of this invaluable biomass source that could lead to significant environmental and economic benefits for man Providing a comprehensive outline of the most recent developments and advances in the field of industrial applications of these plankton this book is an excellent reference resource for researchers and practitioners      *Bioremediation and*

*Biotechnology* Khalid Rehman Hakeem, Rouf Ahmad Bhat, Humaira Qadri, 2020-01-26 Toxic substances threatens aquatic and terrestrial ecosystems and ultimately human health The book is a thoughtful effort in bringing forth the role of biotechnology for bioremediation and restoration of the ecosystems degraded by toxic and heavy metal pollution The introductory chapters of the book deal with the understanding of the issues concerned with the pollution caused by toxic elements and heavy metals and their impacts on the different ecosystems followed by the techniques involved in monitoring of the pollution These techniques include use of bio indicators as well as modern techniques for the assessment and monitoring of toxicants in the environment Detailed chapters discussing the role of microbial biota aquatic plants terrestrial plants to enhance the accumulation efficiency of these toxic and heavy metals are followed by remediation techniques involving myco remediation bio pesticides bio fertilizers phyto remediation and rhizo filtration A sizable portion of the book has been dedicated to the advanced bio remediation techniques which are finding their way from the laboratory to the field for revival of the degraded ecosystems These involve bio films micro algae genetically modified plants and filter feeders Furthermore the book is a detailed comprehensive account for the treatment technologies from unsustainable to sustainable We believe academicians researchers and students will find this book informative as a complete reference for biotechnological intervention for sustainable treatment of pollution

**Anaerobic Treatment of Mine Wastewater for the Removal of Selenate and its Co-Contaminants** Lea Tan, 2018-09-03 Selenium Se pollution has led to several cases of severe aquatic ecosystem deterioration due to Se poisoning caused by bioaccumulation over time However the removal of selenate  $\text{SeO}_4^{2-}$  from wastewater streams with co

contaminants has been largely considered as a black box in anaerobic biological systems using mixed consortia. This research aimed at addressing the effect of wastewater characteristics i.e. co-contaminants such as nitrate  $\text{NO}_3$  and sulfate  $\text{SO}_4^{2-}$ , heavy metals and pH on the biological reduction of  $\text{SeO}_4^{2-}$  and evaluating process integration for Se-laden wastewater treatment with co-contaminants. This study demonstrated that the presence of co-contaminants can actually be beneficial for Se removal provided that the concentrations are carefully monitored and appropriate operating conditions and process configurations are used. The Se removal, total Se and  $\text{SeO}_4^{2-}$  efficiency increased by 30% in the presence of  $\text{NO}_3$  and/or  $\text{SO}_4^{2-}$  compared to systems with  $\text{SeO}_4^{2-}$  alone. Additionally, an integrated process of an ion exchange (IX) column and bioreactors showed improved overall removal capacity for  $\text{SO}_4^{2-}$  and total Se. The knowledge and information gained from this research can help in the advancement and application of biological processes i.e. predicting of reactor performance, solving specific design or practical problems and implementing novel treatment techniques for Se-laden mine wastewater. **APPLIED BIOLOGY OF WOODY**

**PLANTS** Ratikanta Maiti, Humberto González Rodríguez, Ch. Aruna Kumari, 2016-08-10. Woody plants occupy dominant vegetation in forest ecosystem. They play an important role in reducing carbon load from the atmosphere and store them as biomass and carbon as sources of energy. Forest trees are sources of timbers, various domestic uses, medicinal purposes, forest products and sources of animal nutrition. At this juncture, there is a great necessity to save forest trees for life security and effective management and maintain an ecobalance to save earth from the clutch of pollution. To fulfill these objectives, a clear understanding of the biology of trees and its applications is an essential prerequisite for effective management and its application. No such book is available to undergraduate and graduate students and teachers. It discusses experimental biology to study the various aspects of tree biology from a practical stand point guide. This deals with general concepts of plant, soil and environments, the vegetation and biodiversity, morpho-anatomical and ecophysiological traits, phenological events and plasticity, branching pattern and branching density, functioning as solar panel for capture of solar radiation for productivity, diversity of leaves, morphological and biochemical traits such as pigments, epicuticular wax, leaf macronutrients necessary for the growth and development and animal nutrition, wood anatomical traits related to timber quality and utility. A special emphasis has been given in the selection of tree species with high ecophysiological traits. The book deals with advances in research and includes our original research results. **LC GC**, 1988
