Wind of the Spirit is the story of one woman's journey through grief. The loss of her 21 year old son threw her into a storm from which she could see no hope of survival. Through the guidance of the Holy Spirit her journey shows her the truth in God's word that we can experience joy again through the promise of eternity. Roma Johnson Holley lost her 21 year old son Zachary to a horrific vehicle accident. The journey that ensues is one that is more like a roller coaster ride than an actual journey. A roller coaster will take you up and down with twists and turns and then eventually return to where it began. And so has been this journey. Unspeakable joy at the birth of grandchildren and then the remembrance that this child will never know their Uncle Zachary. Unspeakable grief at the loss of a beloved cousin and aunt and then the remembrance that they are now in the presence of God. This journey is one that no one wants to take but that almost everyone will have to endure at some point in their life. The destination of each person will depend upon how we deal with the trials and difficulties along the way. Join Roma as she travels a rough and tumble road until she realizes the power of the Holy Spirit. The comfort, guidance and strength that comes from this one realization changes her entire perspective. **Cycle World Magazine**, 2002-01

Technology in Tropical Forest Science. K. Suzuki, K. Ishii, S. Sakurai, S. Sasaki, 2006-06-18. This book is intended to be a record of the Biotechnology Assisted Re-Afforestation Project in the Asia Pacific Region BIO REFOR since 1992, conducted in cooperation with the International Union of Forest Research Organizations (IUFRO). The purpose of the project is to promote exchanges of information of fundamental research on indigenous species in the Asia Pacific Region in order to restore natural forests. The production, cultivation and maintenance of forest tree species provide highly sustainable production systems that conserve soils, the microenvironment and biodiversity. The key technology for biomass production of forests is propagation via micropropagation or traditional propagation. However, there are many recalcitrant species among useful forest trees to be propagated in large numbers. Recent advances in mycorrhizal technology and in vitro culture have made it possible to commercially propagate useful trees for re-afforestation. In this book, comprehensive information is provided on propagation, mycorrhizal inoculation and reforestation of economically and environmentally important forest trees. Information that usually is available only in widely scattered resources. Here we include a wide area of the ecology and physiology of dipterocarps as a general overview and then cover propagation techniques, mycorrhizal symbiosis, man-made forests and biodiversity in the Asia Pacific region.
