Roess, Elena S. Prassas, 2014-04-03 Since 1950 the Highway Capacity Manual has been a standard used in the planning design analysis and operation of virtually any highway traffic facility in the United States It has also been widely used abroad and has spurred the development of similar manuals in other countries The twin concepts of capacity and level of service have been developed in the manual and methodologies have been presented that allow highway traffic facilities to be designed on a common basis and allow for the analysis of operational quality under various traffic demand scenarios The manual also addresses related pedestrian bicycle and transit issues This book details the fundamental development of the concepts of capacity and level of service and of the specific methodologies developed to describe them over a wide range of facility types The book is comprised of two volumes Volume 1 this book focuses on the development of basic principles and their application to uninterrupted flow facilities freeways multilane highways and two lane highways Weaving merging and diverging segments on freeways and multilane highways are also discussed in detail Volume 2 focuses on interrupted flow facilities signalized and unsignalized intersections urban streets and arterials It is intended to help users of the manual understand how concepts approaches and specific methodologies were developed and to understand the underlying principles that each embodies It is also intended to act as a basic reference for current and future researchers who will continue to develop new and improved capacity analysis methodologies for many years to come **Highway Capacity Manual, 1965** National Research Council (U.S.). Highway Research Board. Committee on Highway Capacity, 1965 **The 1985 Highway Capacity Manual**, 1986 This is a summary of the 1985 Highway Capacity Manual HCM and has been prepared for personnel of the Federal Highway Administration to assist in the transition from the 1965 HCM to the 1985 HCM This summary highlights the major differences between the 1965 HCM and the 1985 HCM The key features and the principal contents of the 1985 HCM are also highlighted The 1985 HCM is a major evolutionary step forward in the state of the art of highway and traffic operational and design analysis It provides a means of evaluating alternative solutions to traffic problems solutions which still require the expertise and creativity of the professional engineer Highway Capacity Manual National Research Council (U.S.).
