*Advances in Computational Science and Engineering* Laurence Tianruo Yang, Jong Hyuk Park, Thanos Vasilakos, Yan Zhang, Damien Sauveron, Xingang Wang, Young-Sik Jeong, 2009-11-02 As communication and networking (CN) become specialized and fragmented, it is easy to lose sight that many topics in CN have common threads and because of this, advances in one sub-discipline may transmit to another. The presentation of results between different sub-disciplines of CN encourages this interchange for the advancement of CN as a whole. Of particular interest is the hybrid approach of combining ideas from one discipline with those of another to achieve a result that is more significant than the sum of the individual parts. Through this hybrid philosophy, a new or common principle can be discovered which has the propensity to propagate throughout this multifaceted discipline. This volume comprises the selection of extended versions of papers that were presented in their shortened form at the 2008 International Conference on Future Generation Communication and Networking (<http://www.sersc.org/FGCN2008>), International Conference on Bio Science and Bio Technology (<http://www.sersc.org/BSBT2008>), International Symposium on Ubiquitous Service Science and Technology (<http://www.sersc.org/UNESST2008>), International Symposium on Database Theory and Application (<http://www.sersc.org/DTA2008>), International Symposium on Control and Automation (<http://www.sersc.org/CA2008>), International Symposium on Signal Processing, Image Processing, and Pattern Recognition (<http://www.sersc.org/SIP2008>), International Symposium on Grid and Distributed Computing (<http://www.sersc.org/GDC2008>), International Symposium on Smart Home (<http://www.sersc.org/SH2008>) and 2009 Advanced Science and
