Modern Chemical Technology and Emission Control M.B. Hocking, 2012-12-06

This text of applied chemistry considers the interface between chemistry and chemical engineering using examples of some of the important process in dustries Integrated with this is detailed consideration of measures which may be taken for avoidance or control of potential emissions This new emphasis in applied chemistry has been developed through eight years of experience gained from working in industry in research development and environment al control fields plus twelve years of teaching here using this approach It is aimed primarily towards science and engineering students as well as to environmentalists and practising professionals with responsibilities or an interest in this interface By providing the appropriate process information back to back with emis sions and control data the potential for process fine tuning is improved for both raw material efficiency and emission control objectives This approach also emphasizes integral process changes rather than add on units for emis sion control Add on units have their place when rapid action on an urgent emission problem is required or when control simply is not feasible by pro cess integral changes alone Obviously fundamental process changes for

emission containment are best conceived at the design stage. However, at whatever stage process modifications are installed, this approach to control should appeal to the industrialist in particular in that something more substantial than decreased emissions may be gained.

Environmental Forensics Robert D. Morrison, Gwen O'Sullivan, 2014-07-01. This publication includes peer-reviewed manuscripts from the 2013 International Network of Environmental Forensics (INEF) Conference held at Pennsylvania State College, USA. INEF is an organization founded by environmental forensic scientists for the express purpose of sharing and disseminating environmental forensic information to the international scientific community. This professionally edited book is the third of a series of INEF conference publications chronicling the current state of the art in environmental forensics. Since the first INEF conference held in Qingdao, China, in 2008, significant advances in the state of the art in environmental forensics have occurred, especially in the fields of compound-specific isotope analysis (CSIA), biological and petroleum hydrocarbon pattern recognition, and the use of advanced multivariate techniques for interpreting environmental forensics data. Of note in these proceedings is the application of environmental forensic techniques to examine contaminant issues associated with hydrofracking, which has received considerable international attention in the past several years. Providing an update on the advancement and refinement of environmental forensic techniques, this book is aimed at scientists, regulators, academics, and consultants from throughout the world.

Food Biochemistry and Food Processing Y. H. Hui, Wai-Kit Nip, Leo M. L. Nollet, Gopinadhan Paliyath, Benjamin K. Simpson, 2008-02-15. The biochemistry of food is the foundation on which the research and development advances in food biotechnology are built. In *Food Biochemistry and Food Processing*, lead editor Y. H. Hui has assembled over fifty acclaimed academicians and industry professionals to create this indispensable reference and text on food biochemistry and the ever-increasing development in the biotechnology of food processing. While biochemistry may be covered in a chapter or two in standard reference books on the chemistry, enzymes, or fermentation of food, and may be addressed in greater depth by commodity-specific texts (e.g., the biotechnology of meat, seafood, or cereal), books on the general coverage of food biochemistry are not so common. *Food Biochemistry and Food Processing* effectively fills this void. Beginning with sections on the essential principles of food biochemistry, enzymology, and food processing, the book then takes the reader on commodity-by-commodity discussions of biochemistry of raw materials and product processing. Later sections address the biochemistry and processing aspects of food fermentation, microbiology, and food safety. As an invaluable reference tool or as a state-of-the-industry text, *Food Biochemistry and Food Processing* fully develops and explains the biochemical aspects of food processing for scientist and student alike.
