

consume clean quality water. Quality water is also essential because it is an ecosystem habitat and is used in our day-to-day activities.

The contamination of water catchment areas has limited the access to clean and safe drinking water (Goncharuk, 2014). Consequently, there has been a rise in the number of bottled water companies that offer an alternative source of clean water. The companies apply various methods such as distillation and filtration to produce sufficient quantities of water. The methods are capital intensive thus consumers have to purchase the water they need. Therefore, it becomes necessary to carry out detailed experiments on the bottled and tap water that is made available to consumers to establish whether it is worthwhile to purchase bottled water.

According to Waite (2012), an analysis of the water produced by bottling companies as well as tap water, revealed some differences in their mineral composition. While water contains some essential minerals, it may be noted that contamination may occur as water is being stored or transported through pipes from their source to consumers' houses. Therefore, treatment at a water collection point does not always guarantee that the water is safe for domestic use. Bottled water, on the other hand, is treated, packed, and distributed under hygienic conditions that are usually set and regulated by federal or state agencies to ensure its safety. Therefore, an experiment to test the differences between tap water and bottled water can reveal the differences that exist between the two, thus helping to establish whether it is worth to pay for bottled water as is the case with bottled water.

Some actions can be taken to help improve water quality. Foremost, one of these actions includes investing in places that are known to be water catchment areas to prevent issues like settlement along the catchment areas and fight industrial pollution into water sources like rivers, lakes, and oceans. Regulations on activities that can be carried out in water sources to avoid some of the daily activities that may cause possible pollution to water sources should be set. This can be achieved by having an environmental monitoring program to make follow-ups on current and upcoming causes of pollution of natural water. Construction of healthy waterways is important to avoid contamination of tap water which
