Network Security and Communication Engineering Kennis Chan,2015-07-06 The conference on network security and communication engineering is meant to serve as a forum for exchanging new developments and research progresss between scholars scientists and engineers all over the world and providing a unique opportunity to exchange information to present the latest results as well as to review the relevant issues on *Soft Computing: Theories and Applications* Millie Pant,Kanad Ray,Tarun K. Sharma,Sanyog Rawat,Anirban Bandyopadhyay,2017-11-23 This book focuses on soft computing and its applications to solve real life problems occurring in different domains ranging from medical and health care supply chain management and image processing to cryptanalysis It presents the proceedings of International Conference on Soft Computing Theories and Applications SoCTA 2016 offering significant insights into soft computing for teachers and researchers and inspiring more and more researchers to work in the field of soft computing The term soft computing represents an umbrella term for computational techniques like fuzzy logic neural networks and nature inspired algorithms In the past few decades there has been an exponential rise in the application of soft computing techniques for solving complex and intricate problems arising in different spheres of life The versatility of these techniques has made them a favorite among scientists and researchers working in diverse areas SoCTA is the first international conference being organized at Amity University Rajasthan AUR Jaipur The objective of SoCTA 2016 is to provide a common platform to researchers academicians scientists and industrialists working in the area of soft computing to share and exchange their views and ideas on the theory and application of soft computing techniques in multi disciplinary areas The aim of the conference is to bring together young and experienced researchers academicians scientists and industrialists for the exchange of knowledge SoCTA especially encourages the young researchers at the beginning of their career to participate in this conference and present their work on this platform **Solutions and Applications of Scattering, Propagation, Radiation and Emission of**

Electromagnetic Waves Ahmed Kishk,2012-11-14 In this book a wide range of different topics related to analytical as well as numerical solutions of problems related to scattering propagation radiation and emission in different medium are discussed Design of several devices and their measurements aspects are introduced Topics related to microwave region as well as Terahertz and quasi optical region are considered Bi isotropic metamaterial in optical region is investigated Interesting numerical methods in frequency domain and time domain for scattering radiation forward as well as reverse problems and microwave imaging are summarized Therefore the book will satisfy different tastes for engineers interested for example in microwave engineering antennas and numerical methods **Development of Coherent Detector**

Technologies for Sub-Millimetre Wave Astronomy Observations Boon Kok Tan,2015-09-15 The thesis describes the development of receiver technologies for sub millimetre astronomy instruments focusing on high performance coherent cryogenic detectors operating close to the superconductor gap frequency The mixer chip which comprises the SIS devices

fed by a unilateral finline and matching planar circuits was fabricated on 15 micron silicon substrate using the recently developed Silicon On Insulator SOI technology. This offered broadband IF and RF performance with fully integrated on chip planar circuits resulting in an easily reproducible mixer chip and a simple mixer block. An important consequence of this design is that it can be extended to the supra THz region and making the fabrication of multi pixel heterodyne arrays feasible. The extension of the operation of major telescopes such as ALMA, APEX and the GLT from single pixel to large format arrays is the subject of extensive research at present time since it will allow fast mapping combined with high resolution of the submillimetre sky. The technology described in this thesis makes a major contribution to this effort.

IEICE Transactions on Electronics, 2005. *High Energy Density and High Power RF*. Steven H. Gold, Gregory S. Nusinovich, 2003-12-04. This is the sixth in a series of international workshops on high power and high energy density microwave devices for accelerator, plasma physics and defense applications. Past workshops were held in Dubna, Montauk, Hayama, Pajaro Dunes and Snowbird. The theme is research and development of techniques to increase microwave energy density and peak power in active and passive microwave devices and components ranging from L band to W band. The scope of this workshop has now been broadened to include radar and high power microwave (HPM) systems, space exploration, neutron sources and even plasma heating and current drive in controlled thermonuclear fusion research.
