

Basic Figures in Geometry

Here are some geometric figures that you should recognize as you study geometry.

Line – a straight path goes in two directions without end.

A line can be named in two ways.

- (a) One way is to label the line with one letter and name it. The letter is usually written in *lowercase* letters and *italicized*.

- (b) Another way is to name two points on the line. The letters that represent these points are usually written as **UPPERCASE** letters.

Segment – a part of a line with two endpoints.

A segment is named by labeling the endpoints of the segment with **UPPERCASE** letters.

Skew lines – lines in space that do not intersect and are not parallel. (You must think in terms of space (3-D), not flat (2-D) like a sheet of paper).

Ray – a part of a line that has one endpoint and continues in one direction without end.

A ray is named by labeling the starting point (endpoint) and a point on the ray with **UPPERCASE** letters. A ray is directional so the letter of the endpoint is written first. (Be careful to **NOT** reverse the letters when naming a ray.)

Angle – a figure formed by two rays that share a common endpoint called the vertex.

An angle is named by labeling the vertex and labeling a point on each ray. Sometimes an angle is named just by the vertex letter. (The vertex letter is always the middle letter of the name.)

Parallel lines – lines in the same plane that never intersect. (think of the lines lying in a two-dimensional area, like a flat sheet of paper).

Perpendicular lines – lines that intersect (cross each other) forming right angles at the point of intersection.

*Note: The small red right-angle in the figure (looks like an upside down L) denotes perpendicular lines.
