in Healthcare explores the individual's needs within the environment, examines the relationship between disability and a variety of traditional and cutting edge technologies, and presents a humanistic discussion of Technology Environment Intervention TEI. Written by a multidisciplinary team of authors, this text introduces readers to a variety of conceptual practice models and the clinical reasoning perspectives. It also provides insight into how designers go about solving human tech problems, discusses best practices for both face to face and virtual teams, and looks at the psychological, sociocultural, and cognitive factors behind the development and provision of assistive technologies. Examines a wide range of technologies and environmental interventions. Demonstrates how a better understanding of the complexity of human interaction with both the physical and social environment can lead to better use of technology. Explores the future of technology and research in TEI. Complete with a range of learning features such as keywords, case studies, and review questions, this book is ideal for undergraduate and graduate students in occupational therapy and other related health professions, as well as those undertaking certification and board examinations.

Reconstruction, Replication and Re-enactment in the Humanities and Social Sciences Sven Dupré, Anna Harris, Julia Kursell, Patricia Lulof, Maartje Stols-Witlox, 2025-10-01. Performative methods are playing an increasingly prominent role in research into historical production processes, materials, bodily knowledge, and sensory skills, and in forms of education and public engagement in classrooms and museums. This book offers for the first time sustained interdisciplinary reflections on performative methods, variously known as Reconstruction, Replication, and Re-enactment (RRR) practices across the fields of history of science, archaeology, art history, conservation, musicology, and anthropology. Each of these fields has distinct histories, approaches, tools, and research questions. Researchers in the historical disciplines have used reconstructions to learn about the materials and practices of the past, while anthropologists and ethnographers have more often studied the re-enactments themselves, participating in these performances as engaged observers. In this book, authors bring their experiences of RRR practices within their discipline into conversation with RRR practices in other disciplines, providing a basis for interdisciplinary cross-fertilization.

Museums and museum politics were important elements in the development of the disciplines of Archaeology and Art History in nineteenth century Britain Here Christopher Whitehead explores some of the key debates and events which led to the conceptual differentiation and physical separation of archaeological and artistic material culture looking especially at the ways in which objects and histories were contested within museum politics For example in the 1850s the status of Egyptian antiquities as art or archaeology was keenly debated and this related closely to questions about which kinds of museum should house them and the possible histories and epistemologies in which they might figure This concise study serves as a basis for a discussion of the continued intellectual legacy of this for our understanding management and presentation of the past in the museum and in curricula It is argued that by understanding the politics and circumstances through which the two disciplines were delimited and distinguished from one another we may be able to glimpse retrospectively the possibility of alternative art histories and alternative archaeologies **Tekkie Visions: Crafting Your Future** Felicia Joyner,2024-09-13
