Crustacean Reproductive Physiology and its Applications Haihui Ye, Chaoshu Zeng, Naoaki

Tsutsui, Heinrich Dirksen, 2022-09-27 Demand for crustacean production is increasing significantly throughout the world and crustacean production from capture fisheries has almost stagnated Aquaculture is the only possibility to meet this ever growing demand for crustaceans Still many commercially important crustaceans are being captured from the wild while breeding and seed production technologies are not available for these species The bottleneck in the successful breeding of crustacean species is mainly due to the non availability of information about reproductive biology Studies on crustacean reproduction will shed new light on understanding the mechanism of sex determination and differentiation meanwhile the application of innovative techniques will vitally contribute to the progress of the crustacean industry The research findings on crustacean reproduction will directly benefit aquaculture for successful captive breeding and seed production Here we are gathering both original research and review papers with the scope of the research topic including but not limited to Mechanism of sex determination sexual differentiation and gonadal development in crustaceans Other life functions e g endocrine nutrition immunity heredity involved in reproduction in crustaceans Applications of modern endocrinological and molecular approaches contributed to crustacean reproduction

Control Mechanisms in the Nervous System Abel Lajtha, 2013-04-17 The explosive accumulation of new knowledge in the biological sciences in the last decades has advanced our understanding of the basic mechanisms that underlie most biological phenomena These advances however have not been uniform but have varied considerably among the different biological problems In some cases e g biochemical genetics radical advances have been made which have changed our ideas and our approaches In other cases

even with work which has yielded much detailed new knowledge our understanding of basic mechanisms remains very inadequate Among the lines of work that have not yet led to dramatic conceptual advances is the problem of control of biological activities This problem is of course basic both to any full understanding of life as a whole and to any real understanding of its most minute phenomena Indeed the myriad of biological activities that we can observe by direct or indirect means are all under the sway of most exquisitely precise mechanisms Any malfunctioning of these mechanisms has serious consequences not only for the particular function itself but for all the related and interlinked activities Medicine and food homology: Emerging tool and methodology for separation and analysis of the bioactive factors Haining

Held, Jr,2017-01-28 Humans and flies look nothing alike yet their genetic circuits are remarkably similar Here Lewis I Held Jr compares the genetics and development of the two to review the evidence for deep homology the biggest discovery from the emerging field of evolutionary developmental biology Remnants of the operating system of our hypothetical common ancestor 600 million years ago are compared in chapters arranged by region of the body from the nervous system limbs and heart to vision hearing and smell Concept maps provide a clear understanding of the complex subjects addressed while encyclopaedic tables offer comprehensive inventories of genetic information Written in an engaging style with a reference section listing thousands of relevant publications this is a vital resource for scientific researchers and graduate and undergraduate students

Opportunistic pathogens: pathogenesis and multi-drug resistance mechanisms Shicheng Chen,Lisheng Liao,Mingxi Wang,2025-04-17 The World Health Organization WHO has identified antimicrobial resistance AMR as one of the most critical global public health threats At least 4 95 million people death was caused by AMR in 2019 Even worse its potential economic impact is estimated to reach a staggering 100 trillion due to AMR in the next thirty years <https://www.who.int/health-topics/antimicrobial-resistance> Researching the development of antibiotic resistance and exploring ways to prevent detect and treat antimicrobial resistant infections have been prioritized in the medical microbiology field AMR mechanisms have been uncovered on many Enterobacteriaceae and Gram positive bacteria such as Enterococcus faecium and Staphylococcus aureus due to their clinical significance and diverse resistance mechanisms Unfortunately the opportunistic pathogens have been overlooked in the clinics because they are often identified as normal flora or common environmental organisms in human specimens Opportunistic pathogens may have low pathogenicity while they can often cause serious infections in immunocompromised patients and lead to outbreak in the healthcare settings They may even lead to diseases in healthy individuals if being introduced into hosts system by traumatization Management of such infections is often challenging due to the lack of guidelines standards for antibiotic susceptibility tests as well as multi drug resistance MDR Lately diseases linked to non pathogenic microorganisms are becoming more common under typical conditions such as Stenotrophomonas maltophilia Elizabethkingia spp Acinetobacter baumannii and many others

Invisible Illness Emily Mendenhall,2026-01-06 A moving cultural history of disability and a powerful call to action to change how our medical system and society supports those with complex chronic conditions From lupus to Lyme invisible illness is often dismissed by everyone but the sufferers Why does the medical establishment continually insist that when symptoms are hard to explain they are probably just in your head Inspired by her work with long COVID patients medical anthropologist Emily Mendenhall traces the story of complex chronic conditions to show why both research and practice fail so many Mendenhall points out disconnects between the reality of chronic disease which typically involves multiple intersecting problems resulting in unique individualized illness and the assumptions of medical providers who behave as though chronic diseases have uniform effects for everyone And while invisible illnesses have historically been associated with white middle class women being believed that you are sick is even more difficult for patients whose social identities and lived experiences may not align with dominant medical thought Weaving together cultural history with intimate interviews Invisible Illness upholds the experiences of those living with complex illness to expose the failures of the American healthcare system and how we can do better

Ontogeny and Phylogeny of Brain Barrier Mechanisms Norman R Saunders ,Helen B Stolp,Shane A Liddelow,2016-04-15 The brain

functions within an internal environment that is determined and controlled by morphological structures and cellular mechanisms present at interfaces between the brain and the rest of the body In vertebrates these interfaces are across cerebral blood vessels blood brain barrier choroid plexuses blood cerebrospinal fluid barrier and pia arachnoid There is a CSF brain barrier in the neuroepithelium lining the ventricular system that is only present in embryos There is now substantial evidence that many brain barrier mechanisms develop early and that in some cases they are functionally more active and even more specialized compared to adult barriers Therefore barriers in developing brain should be viewed as adapted appropriately for the growing brain and not as is still widely believed immature Considerable advances in our understanding of these barrier mechanisms have come from studies of the developing brain and invertebrates A striking aspect to be highlighted in this special edition is that many of the molecular mechanisms in these very diverse species are similar despite differences in the cellular composition of the interfaces This Frontiers Topic comprises articles in three sections Original studies Reviews and Myths Misconceptions Original articles provide new information on molecular and cellular barrier mechanisms in developing brains of primates including human embryos Brchner et al Ek et al Errede et al rodents Bauer et al Liddelow Strazielle Ghera Egea Saunders et al Whish et al chick Bueno et al and zebrafish Henson et al as well as studies in drosophila Hindle Bainton De Salvo et al Limmer et al The Reviews section includes evolutionary perspectives of the blood brain and blood CSF barriers Bueno et al Bill Korzh There are also detailed reviews of the current state of understanding of different interfaces and their functional mechanisms in developing brain Bauer et al Strazielle Ghera Egea Liddelow Richardson et al Errede et al Henson et al Brchner et al and in invertebrates Hindle Bainton De Salvo et al Limmer et al Different aspects of the relationship between properties of the internal environment of the brain and its development are discussed Stolp Molnar Johansson Prasongchean et al A neglected area namely barriers over the surface of the brain during development is also covered Brchner et al Clinically related perspectives on barrier disruption in neonatal stroke are provided by Kratzer et al and other aspects of dysfunction by Morretti et al and by Palmeta et al on the continuing problem of bilirubin toxicity Progress in this field is hampered by many prevailing myths about barrier function combined with methodologies that are not always appropriately selected or interpreted This is covered in the Misconceptions Myths and Methods section including historical aspects and discussion of the paracellular pathway a central dogma of epithelial and endothelial biology Saunders et al and a review of markers used to define brain barrier integrity in development and in pathological conditions Saunders et al Use of inappropriate markers has caused considerable confusion and unreliable interpretation in many published studies Torbett et al deal with the complexities of the new field of applying proteomics to understanding blood brain barrier properties as do Huntley et al with respect to applying modern high throughput gene expression methods Huntley et al The Editorial summarizes the contributions from all authors This includes mention of some the main unanswered but answerable questions in the field and what the impediments to progress may be *The Emotional*
