Data for DoD Manpower Policy Analysis Jacob Alex Klerman, 2009 To allow analyses of its personnel practices the Department of Defense maintains historical administrative data files and administers surveys of military personnel Military manpower analyses also make use of civilian cross sectional and longitudinal data Klerman provides an overview of these data sources and discusses how they can be analyzed with currently underutilized data matching strategies These data matching strategies involve matching DoD administrative data files to 1 civilian

administrative data such as Social Security Administration earnings data 2 DoD survey data and 3 civilian survey data These strategies have the potential for large payoffs in terms of better analysis and therefore better policy for DoD Klerman also discusses the degree to which DoD should help fund a future National Longitudinal Study of Youth and whether DoD should initiate a new military panel survey Data for DoD Manpower Policy Analysis maintains that the research questions that these proposed surveys would help answer can instead be explored through data matching Moreover streamlining procedures for data matching that is making it easier for researchers to analyze the data DoD already has is likely to be much less expensive than engaging in major new data collection efforts
