The Voice in the Machine Roberto Pieraccini, 2012-03-23 An examination of more than sixty years of successes and failures in developing technologies that allow computers to understand human spoken language Stanley Kubrick's 1968 film 2001 A Space Odyssey famously featured HAL a computer with the ability to hold lengthy conversations with his fellow space travelers More than forty years later we have advanced computer technology that Kubrick never imagined but we do not have computers that talk and understand speech as HAL did Is it a failure of our technology that we have not gotten much further than an automated voice that tells us to say or press 1 Or is there something fundamental in human language and speech that we do not yet understand deeply enough to be able to replicate in a computer In *The Voice in the Machine* Roberto Pieraccini examines six decades of work in science and technology to develop computers that can interact with humans using speech and the industry that has arisen around the quest for these technologies He shows that although the computers today that understand speech may not have HAL's capacity for conversation they have capabilities that make them usable in many applications today and are on a fast track of improvement and innovation Pieraccini describes the evolution of speech recognition and speech understanding processes from waveform methods to artificial intelligence approaches to statistical learning and modeling of human speech based on a rigorous mathematical model specifically Hidden Markov Models HMM He details the development of dialog systems the ability to produce speech and the process of bringing talking machines to the market Finally he asks a question that only the future can answer will we end up with HAL like computers or something completely unexpected *Evolution of Media* Mr. Rohit

Verizon Untethered Ivan Seidenberg,2018-05-01 The Verizon leadership team stands apart from most leadership teams today in their willingness repeatedly to put the enterprise before the individual At first blush this might look like a hopelessly old fashioned notion in the age of the selfie Yet I would argue this is a trait that future leaders and boards of directors across industries would do well to understand and embrace Seidenberg not once but twice in the service of company shareholders and employees subordinated himself and put off taking sole leadership of the company to advance the enterprise s odds of success And many others in this story exhibited the same trait to help build this industry leading enterprise They understood that the risk of not acting and thereby destroying value during a period of accelerating technological change and industry consolidation a situation faced by leadership teams around the world today was much greater than the risk of stepping in as No 2 or co CEO In my 50 years of experience it is a rare leadership team that will subordinate itself for the benefit of the industry customers and the company That principle that the company comes first the individual second is what will define successful leadership teams of the future Multiple leadership principles some new some timeless emerge from this narrative and will be of great use to the next generation of leaders across industries and around the world By taking a look at a company that successfully executed exponential transformation we can take the strategies of Verizon leaders and apply them to our own experiences Ram Charan
