*Who's the New Kid in Chemistry?* John D. Butler, 2013-12-12 *Who's the New Kid in Chemistry* offers an unprecedented look at student engagement and teacher best practices through the eyes of an educational researcher enrolled as a public high school student. Over the course of seventy-nine consecutive days, John D. Butler participates in and observes Rhode Island 2013 Teacher of the Year Jessica M. Waters's high school chemistry class, documenting his experiences as they unfold. *Who's the New Kid in Chemistry* is a compelling example of what can be accomplished when an educational researcher and teacher collaborate in the classroom. This work includes a discussion on flexible homework assignments, data-driven instruction, and thirty teacher best practices. This book is an invaluable resource for teachers across all content areas, masters and doctoral research method classes, and future Teachers of the Year.

**Study Skills for Geography, Earth and Environmental Science Students** Pauline E. Kneale, 2013-08-15 There are moments in everyone's degree when you are expected to do something unfamiliar and daunting: present a seminar, go on a fieldtrip, create a wiki page, lead a lab team, and how to do it or what to expect is unclear. Studying at university requires a different approach from studying at school, and this book explains this transition. Packed with practical hints, study tips, short cuts, real-life examples, and careers advice, this book will prove invaluable throughout your geography, earth science, or environmental science degree. Designed for all geography, earth science, and environmental science students, this book provides guidance on time management and effective research, constructing essays, and creating arguments, giving presentations, confidently undertaking fieldwork and laboratory work, avoiding plagiarism, and citing references correctly, using e-technologies such as blogs, and your university's VLE, online assessment, and peer feedback. This guide also explains the role of the academic and how it differs from that of a school teacher, and prepares you for the world of work by showing how the skills you learn at university today can be used in your career choice of tomorrow.

**Environmental Chemistry (Volume-II)**, 2025-09-25 The present volume *Environmental Chemistry Volume II* has been designed as a Discipline Specific Elective (DSE) based on NEP 2020 to provide students with a comprehensive understanding of the chemical principles underlying environmental processes, challenges, and solutions. Building on fundamental concepts, this book emphasizes the chemical aspects of atmospheric, soil, water, and radiation systems, as well as industrial and toxicological influences on the environment. The chapters have been carefully organized to reflect both theoretical foundations and applied dimensions of environmental chemistry. The book also introduces students to emerging areas such as renewable and non-renewable energy resources, etc. This volume is intended not only as a textbook but also as a guide for learners to appreciate the multidisciplinary nature of environmental chemistry and its vital role in addressing contemporary environmental issues. It is hoped that the book will encourage critical thinking, inspire eco-friendly innovations, and nurture responsibility toward sustainable development. The editor gratefully acknowledges the contributions of scientists, educators, authors, and environmental practitioners whose research and insights have enriched the preparation.

of this text Special thanks are due to the students and colleagues who provided feedback and encouragement during its development We sincerely hope that Environmental Chemistry Volume II will serve as a valuable resource for undergraduate and postgraduate students researchers and anyone interested in the chemistry of our environment
