Flood,Andrew Rose,1994 Regressions of ex post changes in floating exchange rates on appropriate interest differentials typically imply that the high interest rate currency tends to appreciate the forward discount puzzle Using data from the European Monetary System we find that a large part of the forward discount puzzle vanishes for regimes of fixed exchange rates That is deviations from uncovered interest parity appear to vary in a way which is dependent upon the exchange rate regime By using the many EMS realignments we are also able to quantify the peso problem **Crime and the Job Market** Richard B. Freeman,1994 This paper presents evidence on the relation among incarceration crime and the economic incentives to crime ranging from unemployment to income inequality It makes three points 1 The U S has incarcerated an extraordinarily high proportion of men of working age overall and among blacks In 1993 the number incarcerated was 1 9 percent of the male work force among blacks the number incarcerated was 8 8 percent of the work force 2 The rising trend in incarceration should have reduced the rate of crime through the incapacitation of criminals and through the deterrent effect of potential arrest and imprisonment But administrative records show no such drop in crime and the victims survey shows a fall far below what could be expected on the basis of incapacitation by itself 3 The implication is that there was an increased propensity to commit crime among the non institutional population The paper focuses attention on the possibility that the continued high rate of crime in the U S despite massive imprisonment of criminals may be one of the costs of the rising inequality in the country and in particular of the

falling real earnings of the less educated While we lack a smoking gun for such a relation the preponderance of evidence suggests that economic incentives have played a role in the increased propensity to commit crime

High Wage Workers and High Wage Firms John M. Abowd, Francis Kramarz, David N. Margolis, 1994 We study a longitudinal sample of over one million French workers and over 500 000 employing firms Real total annual compensation per worker is decomposed into components related to observable characteristics worker heterogeneity firm heterogeneity and residual variation Except for the residual all components may be correlated in an arbitrary fashion At the level of the individual we find that person effects especially those not related to observables like education are the most important source of wage variation in France Firm effects while important are not as important as person effects At the level of firms we find that enterprises that hire high wage workers are more productive but not more profitable They are also more capital and high skilled employee intensive Enterprises that pay higher wages controlling for person effects are more productive and more profitable They are also more capital intensive but are not more high skilled labor intensive We also find that person effects explain 92% of inter industry wage differentials

The Economic Benefits from Immigration George J. Borjas, 1994 Natives benefit from immigration mainly because of production complementarities between immigrant workers and other factors of production and these benefits are larger when immigrants are sufficiently different from the stock of native productive inputs The available evidence suggests that the economic benefits from immigration for the United States are small on the order of 6 billion and almost certainly less than 20 billion annually These gains however could be increased considerably if the United States pursued an immigration policy which attracted a more skilled immigrant flow
