2. Ensure that the living mark of the sprig is at the top position. If it is not at the top position, turn the sprig right by once so that it comes to the top position. Then fix the binder to the top dead center with one stroke.

3. Put a point mass m at the end of the string chain that is aligned with the center of the sprocket and released.

- When the gold mark plates and the main plates of each of the timing sprocket and timing chain are aligned with each other, the above operation is not required.

Turn the crankshaft 90 degrees (Crank angle) in the engine rotation direction from the top dead center under the compression stroke of the cylinder No. 1 so that the inlet valve will not interfere with the piston when removing the crankshaft.

5. Loosen the spiral attaching bolts, using the hexagonal socket provided for servicing of the catalyst.

100

- Here, just touch the bolts and do not remove the bolts and washers.

100

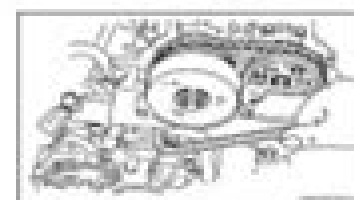

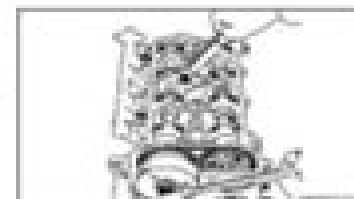

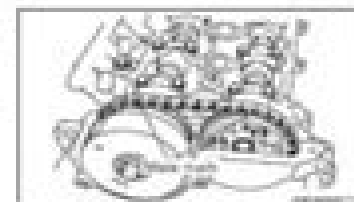

- The timing chain and sprocket will interfere with each other if the bolts are loosened after the timing chain has been refitted. Therefore, loosen the bolts in sequence.
