Waste Water Engineering Dr. B.C. Punmia,Ashok Kr. Jain,Arun Kr. Jain,1998 Fair, Geyer, and Okun's, Water and Wastewater Engineering Nazih K. Shammash, Lawrence K. Wang,2010-10-19 This text series of Water and Wastewater Engineering have been written in a time of mounting urbanisation and industrialisation and resulting stress on water and wastewater systems Clean and ample sources of water for municipal uses are becoming harder to find and more expensive to develop The text is comprehensive and covers all aspects of water supply water sources water distribution sanitary sewerage and urban stormwater drainage This wide coverage is helpful to engineers in their every day practice *Design of Wastewater and Stormwater Pumping Stations* ,1981 *Introduction to Wastewater Treatment Processes* R. Introduction to Wastewater Treatment Processes Second Edition presents the principles of chemical kinetics reactor design and the mechanism of biological treatment processes This book provides the numerical applications that illustrate the treatment of laboratory data Organized into eight chapters this edition begins with an overview of the engineering design of process plants for treatment of wastewaters of industrial or domestic origin This text then examines the various empirical methods for evaluation of concentration of contaminants in wastewaters Other chapters consider the various types of primary treatment of wastewater including sedimentation screening flotation and neutralization and equalization This book discusses as well the stationary film theory applied to the case of oxygen transfer The final chapter deals with tertiary or advanced wastewater treatment which consists of processes designed to achieve higher effluent quality than conventional secondary treatment This book is a valuable resource for practicing engineers and students who are interested in the field of wastewater treatment

Water & Wastewater Engineering M. S. Karuna,2023-12-27 The purification of wastewater is of the utmost importance for environmental preservation and animal and human health Improper treatment of effluent can result in the contamination of water sources the destruction of natural habitats and the transmission of severe diseases

Wastewater treatment plants perform precisely as their name implies they treat the water that is discharged back into the environment after treating it at the source Further action is necessary notwithstanding the global installations of these plants that are currently underway Water is a critically valuable resource that is currently being wasted There are numerous methods for treating effluent the greater the efficiency of the treatment process the greater the proportion that can be recycled prior to its discharge into the ocean The principal objective of wastewater treatment technologies is to safeguard both human health and local ecosystems against the presence of hazardous substances in wastewater Due to the fact that the natural process of water purification cannot maintain pace with the amount of refuse produced by society water treatment facilities were created to accelerate the process In developing nations that have yet to implement established wastewater treatment systems the absence of these processes would significantly increase the dangers of daily life and prevent the recycling of wastewater
